#
# Load dynamic backend modules
# - modulepath is architecture dependent value (32/64-bit system)
# - back_sql.la overlay requires openldap-server-sql package
# - dyngroup.la and dynlist.la cannot be used at the same time

# modulepath /usr/lib/openldap
# modulepath /usr/lib64/openldap

# moduleload accesslog.la
# moduleload auditlog.la
# moduleload back_sql.la
# moduleload chain.la
# moduleload collect.la
# moduleload constraint.la
# moduleload dds.la
# moduleload deref.la
# moduleload dyngroup.la
# moduleload dynlist.la
# moduleload memberof.la
# moduleload pbind.la
# moduleload pcache.la
# moduleload ppolicy.la
# moduleload refint.la
# moduleload retcode.la
# moduleload rwm.la
# moduleload seqmod.la

```

```
# moduleload smbk5pwd.la
```

```
# moduleload sssv1v.la
```

```
moduleload syncprov.la
```

```
# moduleload translucent.la
```

```
moduleload unique.la
```

```
# moduleload valsor.t.la
```

```
# The next three lines allow use of TLS for encrypting connections using a
```

```
# dummy test certificate which you can generate by running
```

```
# /usr/libexec/openldap/generate-server-cert.sh. Your client software may balk
```

```
# at self-signed certificates, however.
```

```
#TLSCACertificatePath /etc/openldap/certs
```

```
#TLSCertificateFile "\"OpenLDAP Server\""
```

```
#TLSCertificateKeyFile /etc/openldap/certs/password
```

```
# Sample security restrictions
```

```
#     Require integrity protection (prevent hijacking)
```

```
#     Require 112-bit (3DES or better) encryption for updates
```

```
#     Require 63-bit encryption for simple bind
```

```
# security ssf=1 update_ssfc=112 simple_bind=64
```

```
# Sample access control policy:
```

```
#     Root DSE: allow anyone to read it
```

```
#     Subschema (sub)entry DSE: allow anyone to read it
```

```
#     Other DSEs:
```

```
#         Allow self write access
```

```
#         Allow authenticated users read access
```

```
#         Allow anonymous users to authenticate
```

```
#     Directives needed to implement policy:
```

```

# access to dn.base="" by * read
# access to dn.base="cn=Subschema" by * read
# access to *
#       by self write
#       by users read
#       by anonymous auth
#
# if no access controls are present, the default policy
# allows anyone and everyone to read anything but restricts
# updates to rootdn. (e.g., "access to * by * read")
#
# rootdn can always read and write EVERYTHING!

# enable on-the-fly configuration (cn=config)
database config
access to *
    by dn.exact="gidNumber=0+uidNumber=0,cn=peercred,cn=external,cn=auth" manage
    by * none

# enable server status monitoring (cn=monitor)
database monitor
access to *
    by dn.exact="gidNumber=0+uidNumber=0,cn=peercred,cn=external,cn=auth" read
    by dn.exact="cn=admin,dc=elenoon,dc=ir" read
    by * none

```

#####
