Foreword

This British Standard has been prepared under the direction of the Quality Management and Statistics Standards Committee.

The previous edition of BS 3811 was published in 1974 and contained 47 terms with definitions. In this second revision of this standard attention has been paid to both national and international developments in terminology, not only in maintenance itself but also in related subjects within the context of terotechnology. It is not intended that the non-maintenance sections should be exhaustive but rather that they should include the sometimes specialized terms with which the maintenance manager may be confronted in his communication with other disciplines, such communication being an essential of terotechnology. This revision of this British Standard supersedes BS 3811 : 1974 which is withdrawn.

In the interest of European and international standardization, the opportunity has been taken to adopt terms and definitions from the EOQC Glossary: 5th Edition (1981) which is similar to BS 4778 : 1979. Account has also been taken of the work of such bodies as REHVA (Representatives of European Heating and Ventilating Associations), IMEKO (International Measurement Confederation) and EFNMS (European Federation of National Maintenance Societies). Attention has also been paid to the recent developments of

maintenance glossaries by the national standards-making organizations of France, Switzerland and West Germany. To assist users of this glossary a 'source' column has been introduced to enable the user to refer to the document from which the definition has been taken to obtain more information about that and related terms. In some instances, in this glossary, definitions taken from other standards have been combined to form a complete definition.

To avoid unnecessary duplication reference is made in appendix A to publications containing related terms.

The relationship of various forms of maintenance and the relationship of various times are shown in figures 1 and 2 respectively.

This glossary of terms has been arranged in conceptual form instead of alphabetically to assist the user by having all related terms together. At the end of this glossary is an index with a reference to the term number, to assist the user in finding any one particular term with its definition.

The terms in section nine represent only a small number that are coming into use in the field of operational research, and it is intended to include a fuller section in the next revision of this standard.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

British Standard Glossary of

Maintenance management terms in terotechnology

0.1 Scope

This document presents in a structured form terms and definitions designed to aid maintenance managers in terotechnological communication with disciplines such as reliability, quality control, cost control, energy conservation and information and computer application.

NOTE. The titles of the publications referred to in this standard are listed on the inside back cover.

Section one. General terms

No.	Term	Source	Definition
101	terotechnology		<p>A combination of management, financial, engineering, building and other practices applied to physical assets in pursuit of economic <i>life cycle costs</i>.</p> <p>NOTE. Its practice is concerned with the specification and design for <i>reliability</i> and <i>maintainability</i> of plant, machinery, equipment, buildings and structures, with their installation, <i>commissioning</i>, operation, <i>maintenance</i>, <i>modification</i> and replacement, and with <i>feedback</i> of information on design, performance and <i>costs</i>.</p>
102	maintenance	EOQC	<p>The combination of all technical and associated administrative actions intended to retain an <i>item</i> in, or restore it to, a state in which it can perform its required function.</p> <p>NOTE 1. The required function may be defined as a stated condition.</p> <p>*NOTE 2. See also section two for terms relating to <i>maintenance</i>.</p>
103	life cycle costs		<p>The total <i>cost</i> of ownership of an <i>item</i> of materiel, taking into account all the <i>costs</i> of acquisition, personnel training, operation, <i>maintenance</i>, modification and disposal, for the purpose of making decisions on new or changed requirements and as a control mechanism in service, for existing and future items.</p> <p>NOTE. See also section three for terms relating to <i>life cycle costs</i>.</p>
104	reliability	EOQC	<p>The ability of an <i>item</i> to perform a required function under stated conditions for a stated period of time.</p> <p>NOTE 1. The term <i>reliability</i> is also used as a <i>reliability</i> characteristic denoting a probability of success, or a success ratio.</p> <p>*NOTE 2. See also clause 26 of BS 4778 : 1979.</p> <p>*NOTE 3. See also section four for terms relating to <i>reliability</i>.</p>
105	quality control	EOQC	<p>The operational techniques and the activities which sustain a quality of product or service that will satisfy given needs; also the use of such techniques and activities.</p> <p>*NOTE 1. See also the notes given in the EOQC Glossary.</p> <p>*NOTE 2. See also section five for terms relating to <i>quality control</i>.</p>
106	cost control		<p>The regulation by executive action of the <i>costs</i> of operating an undertaking, particularly where such action is guided by <i>cost</i> accounting.</p> <p>NOTE. See also section six for terms relating to <i>cost control</i>.</p>

*This note does not form part of the EOQC definition.

No.	Term	Source	Definition
107	energy management		The management of the storage, conversion, distribution and utilization of energy directed to the economic provision of required services and the elimination of avoidable losses. NOTE. See also section seven for terms relating to <i>energy management</i> .
108	information and computer application		The means by which information is acquired, stored, processed and analysed in a systematic sequence of operations. NOTE. See also section eight for terms relating to <i>information and computer application</i> .
109	item	EOQC	(a) A part, equipment, sub-system or system that can be individually considered and separately examined or tested; or (b) An actual or conventional object on which a set of observations may be made; or (c) Defined quantity of material on which a set of observations may be made; or (d) An observed value, either qualitative (attributes) or quantitative (measured).
110	safety	EOQC	The freedom from unacceptable risks of personal harm. NOTE 1. <i>Safety</i> is defined in the context of risk of personal harm. It is traceable quantitatively in decision making on acceptable risks. *NOTE 2. See also clause 13 of BS 4778 : 1979. *NOTE 3. It was previous practice for <i>safety</i> to cover the freedom from unacceptable risks of damage to plant, equipment and buildings.
111	specification	EOQC	The document that describes in detail the requirements with which the product or service has to comply. NOTE 1. <i>Specifications</i> may refer to drawings, patterns or other relevant documents, and may also indicate the means and the criteria whereby <i>compliance</i> can be checked. NOTE 2. For particular types of <i>specification</i> see the entries given in the EOQC Glossary under the heading Target, Functional, Product, Materials, Process, Inspection, Test, Acceptance, Installation, Use, Maintenance and Disposal <i>specification</i> . In practice, the information given under these headings may be collated and treated as a single comprehensive <i>specification</i> , but in the initial drafting it is recommended that they are treated separately so that each is given its full specialized attention. This subject is of paramount importance in the achievement of quality; in many cases poor products or services are the result of inadequate, ambiguous or imprecise <i>specifications</i> . NOTE 3. For some services the requirements are given verbally rather than by means of a written <i>specification</i> .
112	certification	EOQC	The authoritative act of documenting compliance with requirements. NOTE 1. The requirements can relate to personnel, processes, products, organizations and services. NOTE 2. <i>Certification</i> is an area in which quality assurance impinges on regulations, approvals and requirements for manufacturers to satisfy legal obligations. It is a means by which a producer can demonstrate <i>compliance</i> with these constraints. *NOTE 3. See also clause 24 of BS 4778 : 1979.
113	modification	5191	An alteration made to a physically existing <i>item</i> usually resulting in an improvement in performance and generally carried out as the result of a design change (e.g. replacing a plain bearing by a sealed roller bearing). NOTE. Performance includes <i>reliability</i> , <i>maintainability</i> and financial considerations.

*This note does not form part of the EOQC definition.

No.	Term	Source	Definition
114	a service (n)	4884	A supply of air, electricity, gas, water, etc.
115	to service (v)		To replenish the consumables needed to keep an <i>item</i> in operating condition.
116	procurement		All managerial, technical, contractual, administrative and physical actions by or on behalf of an organization requiring goods, materials or services in obtaining the requirements.

Section two. Maintenance terms

NOTE 1. The term *defect* now has a definite meaning within the law relating to product liability and should not be used as a broad *maintenance* term; the term *fault* should be used instead. See section five for the strict definition of *defect* together with all the alternatives, e.g. *blemish*, *imperfection* and *nonconformity*.

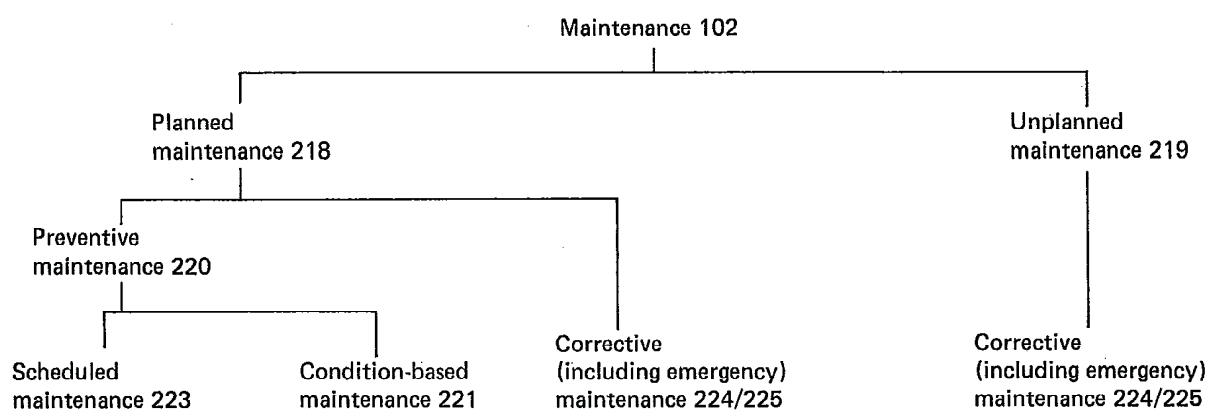

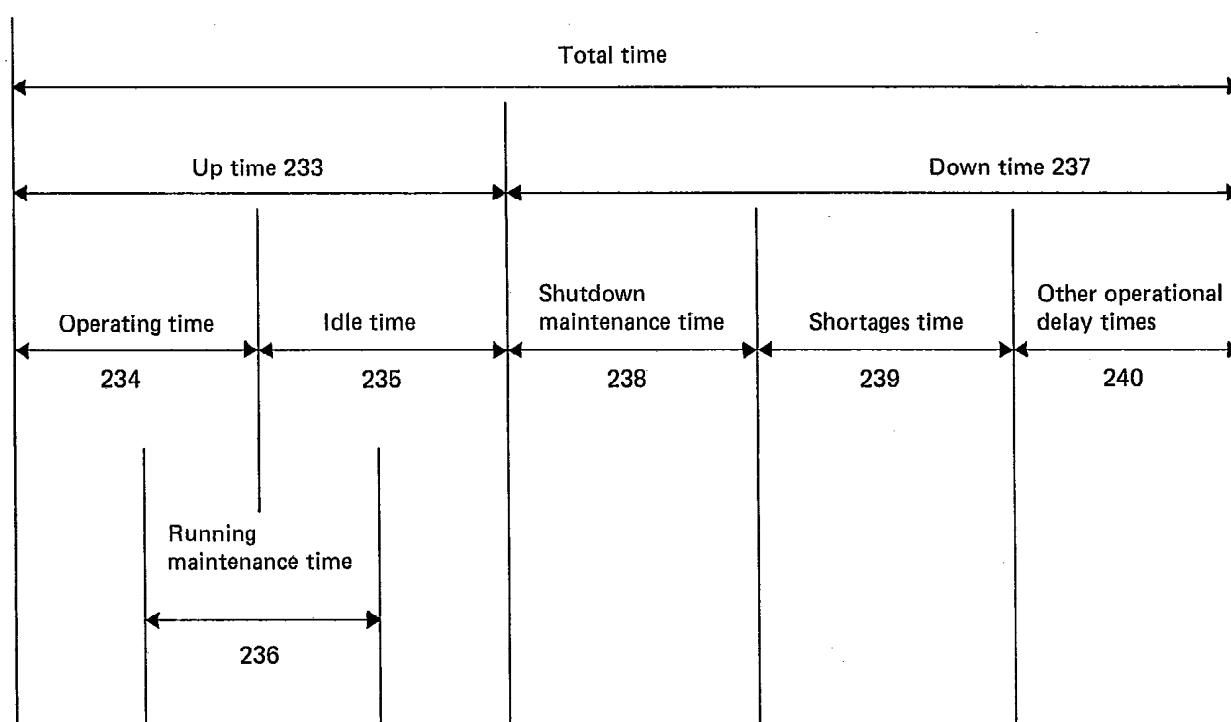

Figure 1. Chart showing relationship of various forms of maintenance

NOTE. In the above 'time' means duration of time and not an instant of time.

Figure 2. Chart showing relationship of various times

No.	Term	Source	Definition
NOTE 2. The term <i>maintenance</i> has already been defined in section one (see 102).			
201	fault		An unexpected deviation from requirements which would require considered action regarding the degree of acceptability. NOTE. See also note 1 at the beginning of this section.
202	failure	EOQC	The termination of the ability of an <i>item</i> to perform a required function.
203	maintainability	EOQC	The ability of an <i>item</i> , under stated conditions of use, to be retained in or restored to a state in which it can perform its required functions, when <i>maintenance</i> is performed under stated conditions and using prescribed procedures and resources. NOTE 1. <i>Maintainability</i> can, depending on the particular analysis situation, be stated by one or several <i>maintainability</i> characteristics, such as discrete probability distribution, mean <i>active maintenance time</i> , etc. NOTE 2. The value of the <i>maintainability</i> characteristic may differ for different <i>maintenance</i> situations. NOTE 3. When the term <i>maintainability</i> is used as a <i>maintainability</i> characteristic, it always denotes the probability that the active <i>maintenance</i> is carried out within a given period of time. NOTE 4. The required function may be defined as a stated condition.
204	maintainability requirements	4778	A statement of the principal means and frequency of preventing an <i>item</i> from failing or of restoring its function when it has failed. *NOTE. Compare with <i>maintenance requirements</i> .
205	maintenance policy		A strategy within which decisions on <i>maintenance</i> are taken.
206	maintenance management		The organization of <i>maintenance</i> within an agreed policy.
207	technical manual		A publication that communicates appropriately and effectively specific direction, data and information to cover the subjects of: (a) purpose and planning (what it is for); (b) operating (how to use it); (c) technical description (how it works); (d) handling, installation, storage transit (how to prepare it for use); (e) <i>maintenance instructions</i> (how to keep it working); (f) <i>maintenance schedules</i> (what is done and when); (g) <i>parts lists</i> (what it consists of); (h) modification instructions (how to change it); (i) <i>disposal instructions</i> (how to dispose of it). It is provided for those involved with managing, operating, maintaining and provisioning for all the materiel. NOTE. See also BS 4884.
208	operating instructions		The document that describes in detail the methods of starting up, shutting down, controlling and monitoring the materiel under all foreseeable conditions. NOTE. This document forms part of the <i>technical manual</i> .
209	installation instructions		The document that describes in detail the procedure for installing the product including, if necessary, the procedure for unpacking and preparation prior to installation. NOTE. This document forms part of the <i>technical manual</i> .
210	commissioning	5643	The advancement of an installation from the stage of static completion to full working order to specified requirements.

*This note does not form part of the definition given in BS 4778.

No.	Term	Source	Definition
211	maintenance requirements	EOQC	A statement of the nature of the <i>maintenance</i> method, in particular the skill of the personnel involved, their facilities and the duration and frequency of <i>maintenance</i> action. *NOTE 1. This information forms part of the <i>technical manual</i> . *NOTE 2. Compare with <i>maintainability requirements</i> .
212	maintenance instructions		The document that describes in detail the procedure and circumstances for carrying out <i>maintenance</i> . NOTE. This document forms part of the <i>technical manual</i> .
213	maintenance schedule		A comprehensive list of <i>items</i> and the <i>maintenance</i> required, including the intervals at which <i>maintenance</i> should be performed. NOTE. This document forms part of the <i>technical manual</i> .
214	maintenance programme		A time based plan allocating specific <i>maintenance</i> tasks to specific periods.
215	parts list		A definitive list of all <i>items</i> which form the materiel. NOTE. This document forms part of the <i>technical manual</i> .
216	disposal instructions		The document that describes in detail the method and precautions to be observed in discarding or otherwise disposing of materiel when it has failed or is no longer required for any reason. NOTE. This document forms part of the <i>technical manual</i> .
217	maintenance planning		Deciding in advance the jobs, methods, materials, tools, machines, labour, time required and timing of <i>maintenance</i> actions.
218	planned maintenance		The <i>maintenance</i> organized and carried out with forethought, control and the use of records to a predetermined plan. NOTE. <i>Preventive maintenance</i> is always part of <i>planned maintenance</i> ; <i>corrective maintenance</i> may or may not be.
219	unplanned maintenance		The <i>maintenance</i> carried out to no predetermined plan.
220	preventive maintenance	EOQC	The <i>maintenance</i> carried out at predetermined intervals or corresponding to prescribed criteria and intended to reduce the probability of <i>failure</i> or the performance degradation of an <i>item</i> .
221	condition based maintenance		The <i>preventive maintenance</i> initiated as a result of knowledge of the condition of an <i>item</i> from routine or continuous monitoring.
222	condition monitoring		The continuous or periodic measurement and interpretation of <i>data</i> to indicate the condition of an <i>item</i> to determine the need for <i>maintenance</i> . NOTE. <i>Condition monitoring</i> is normally carried out with the <i>item</i> in operation, in an operable state or removed but not subject to major stripdown.
223	scheduled maintenance routine maintenance <i>deprecated</i>		The <i>preventive maintenance</i> carried out to a predetermined interval of time, number of operations, mileage, etc.
224	corrective maintenance	EOQC	The <i>maintenance</i> carried out after a <i>failure</i> has occurred and intended to restore an <i>item</i> to a state in which it can perform its required function.
225	emergency maintenance		The <i>maintenance</i> which it is necessary to put in hand immediately to avoid serious consequences.
226	maintenance history		A <i>history record</i> which is used for the purpose of <i>maintenance planning</i> .

*This note does not form part of the EOQC definition.

No.	Term	Source	Definition
227	availability	4778	<p>The ability of an <i>item</i> (under combined aspects of its <i>reliability</i>, <i>maintainability</i> and <i>maintenance</i> support) to perform its required function at a stated instant of time or over a stated period of time.</p> <p>NOTE 1. The term <i>availability</i> is also used as an <i>availability</i> characteristic denoting either the probability of performing at a stated instant of time or the probability related to an interval of time.</p> <p>NOTE 2. When <i>availability</i> is used as a characteristic it has to be associated with a modifier.</p> <p>NOTE 3. The <i>availability</i> of an <i>item</i> does not necessarily imply that it is performing, but that it is in a state to perform.</p>
228	observed mean availability	EOQC	<p>The ratio of the cumulative time for which an <i>item</i> has been in a condition to perform a required function to the cumulative time under observation, or at instants of time (chosen by a sampling technique), the mean of the proportion of a number of nominally identical <i>items</i> that performed or have been in a condition to perform their required function.</p> <p>NOTE 1. When one limiting value is given, unless otherwise stated this is usually the lower limit.</p> <p>NOTE 2. The <i>observed mean availability</i> is to be associated with a stated period of time and with stated conditions of use and <i>maintenance</i>.</p>
229	observed instantaneous availability	EOQC	<p>At a stated instant of time the proportion of occasions when an <i>item</i> has performed or has been in a condition to perform a required function.</p> <p>NOTE 1. Occasions can refer to either a number of <i>items</i> at a single instant of time, or to one or more <i>items</i> at a series of instants.</p> <p>NOTE 2. The run-up time is counted in <i>down time</i> when the equipment is brought into use for the first time.</p> <p>NOTE 3. The <i>observed instantaneous availability</i> has to be associated with a period of time and with stated conditions of use and <i>maintenance</i>.</p>
230	outage*		<p>The state of an <i>item</i> being unable to perform its required function.</p> <p>NOTE 1. <i>Outage</i> may be measured in terms of numbers of outages per period of time or as a proportion of <i>outage</i> time to total time.</p> <p>NOTE 2. <i>Outage</i> may be 'scheduled' or 'forced'.</p>
231	scheduled outage* planned outage deprecated		<i>Outage</i> due to the programmed taking out of service of an <i>item</i> .
232	forced outage*		<i>Outage</i> due to the unscheduled putting out of service of an <i>item</i> .
233	up time	EOQC	The period of time during which an <i>item</i> is in a condition to perform its intended function.
234	operating time	EOQC	The period of time during which an <i>item</i> performs its intended function.
235	idle time	5191	<p>The period of time during which an <i>item</i> is available to perform its intended function, but is not used due to a shortage of work, tooling, material, operators, etc.</p> <p>†NOTE. See figure 5 of BS 5191 : 1975 for a diagrammatic representation of various times.</p>
236	running maintenance time		The period of time during which <i>maintenance</i> is carried out whilst the <i>item</i> is in service.

*This term is used in the electricity supply industry.

†This note does not form part of the definition given in BS 5191.

No.	Term	Source	Definition
237	down time		<p>The period of time during which an <i>item</i> is not in a condition to perform its intended function.</p> <p>NOTE 1. The <i>down time</i> of an <i>item</i> will be made up of <i>active maintenance time</i> and delays due to reporting, awaiting labour, awaiting spares, facilities, movement, etc.</p> <p>NOTE 2. Unless otherwise stated, <i>down time</i> of an <i>item</i>, due to <i>failure</i>, is considered to commence at the instant the <i>item</i> is determined to have failed.</p> <p>NOTE 3. Unless otherwise stated, <i>down time</i> will include any additional time necessary to reach the same stage in the working programme of the <i>item</i> as at the time of <i>failure</i>.</p> <p>NOTE 4. See also definition <i>idle time</i>.</p>
238	shutdown maintenance time		<p>The period of time during which <i>maintenance</i> is carried out whilst the <i>item</i> is out of service.</p> <p>NOTE. The <i>item</i> may be out of service due to either a planned shutdown or a breakdown.</p>
239	shortages time		The period of time during which the <i>item</i> is unable to perform due to shortages of labour, spares, facilities, movement, etc.
240	other operational delay times		The period of time during which the <i>item</i> is unable to perform due to a <i>failure</i> which has not been scheduled for action.
241	maintenance time	EOQC	<p>The period of time during which <i>maintenance</i> actions, including delays inherent in the <i>maintenance</i> operations, are performed on an <i>item</i> either manually or automatically.</p> <p>NOTE 1. The inherent delays include those attributable to design or to prescribed <i>maintenance</i> procedures.</p> <p>NOTE 2. <i>Maintenance</i> may be carried out while the <i>item</i> is performing its intended function.</p>
242	active maintenance time	EOQC	The time during which one or more persons are working, or an automatic process is taking place, on an <i>item</i> to effect <i>maintenance</i> .
243	observed mean active maintenance time	EOQC	The ratio of the sum of the observed <i>active maintenance times</i> to the total number of <i>maintenance</i> actions.
244	assessed mean active maintenance time	EOQC	<p>The mean <i>active maintenance time</i> determined by a limiting value or values of the confidence interval associated with a stated confidence level based on the same <i>data</i> as the <i>observed mean active maintenance time</i> of nominally identical <i>items</i>.</p> <p>NOTE 1. The source of the <i>data</i> shall be stated.</p> <p>NOTE 2. Results can be accumulated (combined) only when all conditions are similar.</p> <p>NOTE 3. It should be stated whether one-sided or two-sided interval is being used.</p> <p>NOTE 4. The assumed underlying distribution of <i>mean active maintenance times</i> shall be stated.</p> <p>NOTE 5. When one limiting value is given this is usually the upper limit.</p>
245	predicted mean active maintenance time	EOQC	The mean <i>active maintenance time</i> of an <i>item</i> calculated by taking into account the <i>reliability characteristics</i> and the mean <i>active maintenance time</i> of all its parts and other relevant factors according to the stated conditions.
246	corrective maintenance time repair time <i>deprecated</i>	EOQC	That part of the <i>maintenance time</i> , including that due to logistic delays, during which <i>corrective maintenance</i> is performed on an <i>item</i> .
247	active corrective maintenance time active repair time <i>deprecated</i>	EOQC	That proportion of the <i>active maintenance time</i> in which repairs are carried out.

No.	Term	Source	Definition
248	preventive maintenance time	EOQC	That part of the <i>maintenance time</i> during which <i>preventive maintenance</i> is performed on an <i>item</i> , including the time attributable to logistic delays inherent in the <i>preventive maintenance</i> operations. NOTE 1. The inherent delays include delays attributable to design or to prescribed <i>maintenance</i> procedures. NOTE 2. <i>Preventive maintenance time</i> does not include any time taken to maintain an <i>item</i> that has been replaced.
249	active preventive maintenance time	EOQC	That proportion of the <i>active maintenance time</i> in which <i>preventive maintenance</i> is carried out.
250	scheduled outage duration*		Within a specified period of time, the period of time during which an <i>item</i> is not available to perform its function because it is withdrawn from service according to programme.
251	forced outage duration*		Within a specified period of time, the period of time during which an <i>item</i> is incapable of performing its function because of a <i>fault</i> .
252	outage rate*		For a particular class of <i>outage</i> and a specified period of time, the quotient of the number of <i>outages</i> to the <i>up time</i> for an <i>item</i> , e.g. <i>scheduled outage</i> rate, <i>forced outage</i> rate, etc.
253	utilization factor		The ratio of the actual time in use to the <i>availability</i> over a stated interval of time. NOTE. If the materiel is capable of variable output, the term is usually defined as 'the ratio of the actual output to the maximum possible output during the time that the materiel was available, measured over the stated interval of time'.
254	breakdown		<i>Failure</i> resulting in the non-availability of an <i>item</i> . NOTE. See also definition for <i>availability</i> .
255	repair		To restore an <i>item</i> to an acceptable condition by the renewal, replacement or mending of worn, damaged or decayed parts.
256	overhaul		A comprehensive <i>examination</i> and <i>restoration</i> of an <i>item</i> , or a major part thereof, to an acceptable condition.
257	restoration		<i>Maintenance</i> actions intended to bring back an <i>item</i> to its original appearance or state.
258	rehabilitation refurbishment <i>deprecated</i>		Extensive work intended to bring plant or buildings up to current acceptable functional conditions, often involving improvements.
259	running maintenance		<i>Maintenance</i> which can be carried out whilst the <i>item</i> is in service.
260	shut down maintenance		<i>Maintenance</i> which can only be carried out when the <i>item</i> is out of service.
261	examination		A comprehensive <i>inspection</i> supplemented by measurement and physical testing in order to determine the condition of an <i>item</i> .
262	inspection	EOQC	The process of measuring, examining, testing, gauging or otherwise comparing the unit with the applicable requirements.
263	survey		An <i>examination</i> , the written report of which would include a recommendation for action.

*This term is used in the electricity supply industry.

No.	Term	Source	Definition
264	test	EOQC	A critical trial or <i>examination</i> of one or more properties of characteristics of a material, product, set of observations, etc. *NOTE. See also clause 21 of BS 4778 : 1979.
265	to clean (v)		To reduce contamination to an acceptable level.
266	work requisition		A document requesting work to be carried out.
267	work specification		A document describing the way in which the work is to be carried out. It may define the materials, tools, time, standards.
268	work order job card <i>deprecated</i>		A written instruction detailing work to be carried out.
269	permit to work		A signed document, authorizing access to an <i>item</i> , which defines conditions, including safety precautions, under which work may be carried out. This may include a document, signed on completion of <i>maintenance</i> , stating that an <i>item</i> is safe and ready for use.
270	feedback		A written or oral report of the success or <i>failure</i> of an action to achieve its desired result which can be used to influence design, performance and <i>costs</i> .
271	job report		A statement recording the work done and the condition of the <i>item</i> .
272	stock inventory <i>deprecated</i>	5191	All the tangible material assets of a company other than the fixed assets; comprising all the finished or saleable products, all the <i>items</i> to be incorporated into the finished products, and all the <i>items</i> to be consumed in the process of manufacturing the product or in the carrying out of the business. NOTE 1. <i>Inventory</i> , when used as a generic term, is synonymous with <i>stock</i> . This use is common in the USA and extensive in the UK. NOTE 2. An <i>inventory</i> , when used specifically, is defined as a list of tangible material assets. For production control purposes this can be limited to being a list of <i>stock</i> .
273	spares stock	5191	<i>Items</i> which are held available for <i>maintenance</i> purposes or for the replacement of defective parts. NOTE. If <i>spares stock</i> is associated with a saleable product it is regarded as direct stock, whereas if associated with the fixed assets (e.g. plant, vehicles) it is regarded as indirect stock.
274	consumable stock		Expendable materials (e.g. oils, lubricants, nails, packing) that are held available for <i>maintenance</i> purposes.
275	storage life shelf life <i>deprecated</i>	EOQC	The specified length of time prior to use for which <i>items</i> which are inherently subject to deterioration are deemed to remain fit for use under prescribed conditions.
276	daywork		Charging for work for which control standards have been determined (e.g. quality) but which cannot readily be measured in accordance with general principles. NOTE. The normal practice is to record labour, materials and plant used as the work proceeds, and to charge at standard rates plus agreed on-costs.
277	waiting time		The period of time for which an operator is available for production but is prevented from working.

*This note does not form part of the EOQC definition.

No.	Term	Source	Definition
278	nugatory time non productive time <i>deprecated</i>		That portion of time for which payment is made but for which no <i>service</i> is rendered.
279	diagnosis		The art or act of deciding from symptoms the nature of a <i>fault</i> .
280	diagnostic		Of or assisting <i>diagnosis</i> .

Section three. Life cycle cost terms

NOTE. The term *life cycle costs* has already been defined in section one (see 103).

301	life cycle costing		The technique of considering <i>life cycle costs</i> .
302	acquisition costs		The total <i>costs</i> to the materiel owner of acquiring an <i>item</i> of materiel and bringing it to the condition where it is capable of performing its intended function. NOTE. This includes the financial effects of activities involving the purchase of goods and services extra-murally to the organization and/or of providing necessary goods and services intra-murally to the organization.
303	running costs costs in use <i>deprecated</i>		The total <i>costs</i> to the materiel owner of the operation, <i>maintenance</i> and modification of an <i>item</i> of materiel. NOTE. The term <i>costs in use</i> is normally applied to building.
304	disposal costs		The total <i>costs</i> to the materiel owner of disposing of an <i>item</i> of materiel when it has failed or is no longer required for any reason. NOTE. These <i>costs</i> may be either positive or negative.

Section four. Reliability terms

NOTE. The term *reliability* has already been defined in section one (see 104).

401	reliability characteristics		Quantities used to express <i>reliability</i> in numerical terms. NOTE. The six characteristics of <i>reliability</i> , together with all the variations are given in clause 31 of BS 4778 : 1979.
402	design for reliability		The process of task recognition and problem solving to enable an <i>item</i> to perform a required function under stated conditions for a stated period of time. NOTE. All <i>items</i> should be designed to be as reliable as required for the efficient performance of the <i>item</i> using the parameters given in clause 17 of BS 4778 : 1979.
403	reliability tests		A critical trial or <i>examination</i> of an <i>item</i> to determine if it will perform a required function under stated conditions for a stated period of time. NOTE. <i>Reliability tests</i> should be specified and carried out under the headings given in clause 30 of BS 4778 : 1979.
404	reliability data		Data on characteristics permitting quantitative evaluation of <i>reliability</i> . NOTE. Details of the different kinds of data which it is normal to collect are given in clause 32 of BS 4778 : 1979.
405	failure	EOQC	The termination of the ability of an <i>item</i> to perform a required function. *NOTE. See also clause 27 of BS 4778 : 1979.
406	failure classification		The allocation of a <i>failure</i> to one of the classifications under the headings given in clause 28 of BS 4778 : 1979.
407	failure report		A document reporting departure of an <i>item</i> from an <i>acceptable condition</i> .

*This note does not form part of the EOQC definition.

Section five. Quality control terms

NOTE. The term *quality control* has already been defined in section one (see 105).

No.	Term	Source	Definition
501	defect	EOQC	<p>A departure of a quality characteristic from its intended level or state that occurs with a severity sufficient to cause an associated product or <i>service</i> not to satisfy intended normal, or reasonably foreseeable, usage requirements.</p> <p><i>Defects</i> will generally be classified by their degree of seriousness such as:</p> <p><i>Class 1. Very serious:</i> Leads directly to severe injury or catastrophic economic loss.</p> <p><i>Class 2. Serious:</i> Leads directly to significant injury or significant economic loss.</p> <p><i>Class 3. Major:</i> Related to major problems with respect to intended normal, or reasonably foreseeable, use.</p> <p><i>Class 4. Minor:</i> Related to minor problems with respect to intended normal, or reasonably foreseeable, use.</p> <p>NOTE 1. The word <i>defect</i> is appropriate for use when a quality characteristic of a product or <i>service</i> is evaluated in terms of usage (as contrasted to <i>conformance to specifications</i>).</p> <p>NOTE 2. <i>Defects</i> of classes 1 and 2 are also designated 'critical defects' and may have particular significance in relation to liability.</p> <p>*NOTE 3. The term <i>defect</i> should only be used in this specific sense and it should be distinguished from <i>blemish</i>, <i>imperfection</i> and <i>nonconformity</i>.</p> <p>*NOTE 4. The distinctions between these definitions is essential to cope with product liability problems. Because the term <i>defect</i> now has a definite meaning within the law it should not be used as a broad <i>maintenance</i> term. See <i>fault</i>.</p> <p>*NOTE 5. The draft EEC Directive on Product Liability states that 'A product is defective when, being used for the purpose for which it is apparently intended, it does not provide for persons or property the <i>safety</i> which a person is entitled to expect, taking into account all the circumstances, including its presentation and the time at which it was put into circulation'.</p>
502	blemish	EOQC	<p>An <i>imperfection</i> that occurs with a severity sufficient to cause awareness, but that should not cause any real impairment with respect to intended normal, or reasonably foreseeable, usage requirements.</p> <p>NOTE. The word <i>blemish</i> is appropriate for use when a quality characteristic of a product or <i>service</i> is evaluated in terms of customer awareness (as contrasted to simply <i>conformance to specifications</i>). There may be synonyms for <i>blemish</i> more appropriate to particular products or <i>services</i>.</p>
503	blemished unit	EOQC	A unit of product or <i>service</i> containing at least one <i>blemish</i> .
504	imperfection	EOQC	<p>A departure of a quality characteristic from its intended level or state without any association with <i>conformance to specification</i> requirements or to the usability of a product or <i>service</i>.</p> <p>NOTE 1. Usually <i>imperfections</i> will be rated on a severity scale or measured as deviations and, unless of high severity of magnitude, would be reasonably expected in a product or <i>service</i> of acceptable quality.</p> <p>NOTE 2. An alternative term for <i>imperfections</i> is 'quality characteristic departure'.</p> <p>NOTE 3. For quality characteristics where there is no designated intended level so that a 'departure' is not definable, 'observed measurements' will serve the same role as <i>imperfection</i> in providing information. In some cases where the differences become part of the product description, it may be more appropriate to use a term such as 'variant'.</p>

*This note does not form part of the EOQC definition.

No.	Term	Source	Definition
			<p>NOTE 4. The term <i>imperfection</i> is a general classification. Each <i>imperfection</i> type will usually be identified by its specific name (e.g. scratch, weight, missing part, etc.). The severity or magnitude indicator may be a measurement deviation, a 'guide' identification or some other appropriate scale rating. Some <i>imperfections</i> may involve a large number of severity or magnitude classifications while others, such as a missing part, may involve only one.</p> <p>NOTE 5. The very existence of a specified tolerance is recognition that achieving 'perfection' for every quality characteristic is essentially impractical on an economic basis and, under usual circumstances, impossible in a physical sense. In many situations 'perfection' cannot be defined other than as some desired aim.</p>
505	compliance	EOQC	<p>An affirmative indication or judgement that the supplier of a product or <i>service</i> has met the requirements of the relevant <i>specifications</i>, contract or regulation; also the state of meeting the requirements.</p> <p>NOTE. Refers to delivery of contract <i>items</i> whereas <i>conformance</i> refers to a manufacturing or distribution stage.</p>
506	conformance	EOQC	<p>An affirmative indication or judgement that a product or <i>service</i> has met the requirements of the relevant <i>specifications</i>, contract or regulation; also the state of meeting the requirements.</p> <p>NOTE. In <i>quality control</i> usage, <i>conformance</i> customarily refers to an assessment not dependent on the passage of time in product use, as contrasted to <i>reliability</i> which has a time connotation. See also the comment under <i>compliance</i>.</p>
507	conformity	EOQC	<p>The fulfilment by an <i>item</i> or <i>service</i> of <i>specification</i> requirements.</p> <p>NOTE. <i>Conformity</i> may refer to a single quality characteristic in control or appraisal phases or to the entire set of <i>specification</i> requirements.</p>
508	nonconformity	EOQC	<p>A departure of a quality characteristic from its intended level or state that occurs with a severity sufficient to cause an associated product or <i>service</i> not to meet a <i>specification</i> requirement.</p> <p>NOTE. In some situations, requirements coincide with customer usage requirements (see definition of <i>defect</i>). In other situations, they may not coincide, being either more or less stringent, or the exact relationship between the two is not fully known or understood. When a quality characteristic of a product or <i>service</i> is 'evaluated' in terms of <i>conformance</i> to <i>specification</i> requirements, the use of the term <i>nonconformity</i> is appropriate. The emphasis on the word 'evaluated' is that of making a decision concerning <i>conformance</i>, whereas an <i>imperfection</i> rating basically deals with a measurement process. Contractual obligations, stated or implied, may be involved, or the <i>specification</i> requirements may be purely internal and deliberately set tighter than the customer requirements.</p>
509	acceptable condition		<p>The condition agreed for each particular usage.</p> <p>NOTE. Attention is drawn to the fact that statutory requirements may exist governing minimum <i>acceptable conditions</i>.</p>
510	calibration	4778	<p>All the operations for the purpose of determining the values of the errors of a measuring instrument (and, if necessary, to determine other metrological properties).</p> <p>NOTE 1. The metrological usage of the term <i>calibration</i> is often extended to include operations such as adjustment, gauging, scale graduation, etc.</p> <p>NOTE 2. This definition is the same as that given in 3.6 of BS 5223 : 1975.</p>

Section six. Cost control terms

NOTE. The term *cost control* has already been defined in section one (see 106).

No.	Term	Source	Definition
601	budgetary control	5191	The establishment of budgets relating the responsibilities of executives to the requirements of a policy, and the continuous comparison of actual with budgeted results either to secure by individual action the objective of that policy or provide a basis for its revision.
602	estimate		An assessment based on a detailed breakdown of the resources, etc., involved, of the <i>cost</i> expected to arise in respect of a given thing or <i>service</i> . This is usually calculated before the expenditure occurs, or before the true <i>costs</i> are known.
603	costing methods, principles and techniques		All those methods, principles and techniques used in <i>cost control</i> . NOTE. See B.1 of BS 5191 : 1975.
604	cost centre	5191	A location, person or <i>item</i> of equipment (or group of these) in respect of which <i>costs</i> may be ascertained and related to <i>cost</i> units, e.g. processes <i>cost centre</i> , production <i>cost centre</i> , <i>service cost centre</i> , etc.
605	cost(s)	4778	The expenditure (actual or notional) incurred on, or attributable to, a given thing. NOTE. The word <i>cost</i> can rarely stand on its own, and should be qualified as to its nature or limitations (e.g. historical, variable, etc.) and related to a particular thing or 'object of thought' (e.g. a given quantity or unit of goods made or <i>services</i> performed).
606	quality related costs	4778	The expenditure incurred in <i>defect</i> prevention and appraisal activities plus the losses due to internal and external failure. *NOTE. See BS 6143 for guidance on the use of these <i>costs</i> , detailed briefly in 607, 608, 609 and 610.
607	prevention costs	EOQC	The <i>cost</i> of any action taken to improve the quality system, e.g. to investigate, prevent or reduce the risk of <i>defects</i> and <i>failures</i> . NOTE. <i>Prevention costs</i> include the <i>cost</i> of planning, setting up and maintaining the <i>quality control</i> system.
608	appraisal costs	EOQC	The <i>cost</i> of assessing the achievement of specified quality, e.g. <i>costs of inspection</i> . NOTE. <i>Appraisal costs</i> can include the <i>cost</i> of inspecting, testing, etc. carried out during and on completion of manufacture.
609	internal failure costs		The <i>costs</i> arising within the manufacturing organization due to <i>failure</i> .
610	external failure costs		The <i>costs</i> arising outside the manufacturing organization due to <i>failure</i> .
611	cost function	EOQC	An expression of the way <i>cost</i> varies with a given parameter.
612	elements of cost		All those <i>items</i> which are considered individually and which are combined together to form the total <i>cost(s)</i> . NOTE. See B.3 of BS 5191 : 1975.

*This note does not form part of the definition given in BS 4778.

No.	Term	Source	Definition
613	economic quality level	4778	The economic level of quality at which the <i>cost</i> of securing higher quality would exceed the benefits of the improved quality.
614	valuation of stock		The total value of <i>stock</i> , usually measured in monetary units. NOTE. See B.2 of BS 5191 : 1975.

Section seven. Energy management terms

NOTE. The term *energy management* has already been defined in section one (see 107).

701	energy audit	5643	The determination of actual energy used in each part of an installation or process.
702	energy budget	5643	The energy allowance for building or process purposes.
703	energy requirement	5643	The summation of the amounts of energy used in a building or process.
704	energy target	5643	The desired energy demand of a building or process.
705	degree day	5643	The number of degrees of temperature difference on any one day between a given base temperature and the mean day outside temperature.
706	heat gain	5643	The flow of heat into an enclosure from all sources other than by space heating means.
707	heat loss	5643	The rate of heat flow from a space.
708	heat reclaim	5643	The principle whereby heat that might otherwise be discharged to waste is passed through a suitable form of heat exchanger and thereby recovered for other uses.
709	heat recovery	5643	A process that enables waste heat to be stored or transferred for the purpose of performing a useful function elsewhere.

Section eight. Information and computer application terms

NOTE. The term *information and computer application* has already been defined in section one (see 108).

801	classification	EOQC	The act of grouping items into classes.
802	codification		The act of systematically sequencing, identifying and presenting <i>items</i> within their class or classes.
803	history record		A record of usages, events and actions as appropriate relating to a particular <i>item</i> .
804	physical asset register		A record of <i>items</i> , including information such as constructional and technical details about each. This may be combined with an <i>inventory</i> (see note 2 to 272).
805	data	3527	A representation of facts, concepts, or instructions in a formalized manner suitable for communication, interpretation, or processing by humans or by automatic means.
806	to record (v)		To preserve information in a file.
807	a record (n)	3527	A set of related <i>data</i> or words treated as a unit. NOTE. <i>Example.</i> In <i>stock</i> control, each invoice could constitute one <i>record</i> .

No.	Term	Source	Definition
808	hardware	3527	The physical equipment used in <i>data</i> processing, as opposed to <i>computer programs</i> , procedures, rules and associated documentation.
809	computer	3527	A <i>data</i> processor that can perform substantial computation, including numerous arithmetic operations or logic operations, without intervention by a human operator during a run.
810	central processing unit (CPU)	3527	A unit of a <i>computer</i> that includes circuits controlling the interpretation and execution of instructions.
811	keyboard		A device, visually similar to a typewriter, which is used to put <i>data</i> into a <i>computer</i> .
812	card reader	3527	A device that reads or senses the holes in a punched card, transforming the <i>data</i> from hole patterns to electrical signals.
813	visual display unit (VDU)		A device, visually similar to a television set, which is used to display <i>data</i> from a <i>computer</i> .
814	printer	3527	An output unit that produces a durable <i>record</i> of <i>data</i> in the form of a sequence of discrete graphic characters belonging to a predetermined character set.
815	magnetic disk	3527	A flat circular plate with a magnetizable surface layer on which <i>data</i> can be stored by magnetic recording.
816	disk pack	3527	A removable assembly of <i>magnetic disks</i> .
817	flexible disk floppy disk <i>deprecated</i>	3527	A flexible <i>magnetic disk</i> enclosed in a protective container.
818	magnetic tape	3527	A tape with a magnetizable surface layer on which <i>data</i> can be stored by magnetic recording.
819	direct access store (RAM) random access store	3527	A storage device that provides direct access to <i>data</i> . NOTE. The contents of the store can be infinitely modified.
820	read only store (ROM)	3527	A storage device whose contents cannot be modified, except by a particular user, or when operating under particular conditions. NOTE. <i>Example.</i> A storage device in which writing is prevented by a lockout.
821	computer program	3527	A schedule or plan that specifies actions which may or may not be taken expressed in a form suitable for execution by a <i>computer</i> .
822	software	3527	<i>Computer programs</i> , procedures, rules, and any associated documentation concerned with the operation of a <i>data</i> processing system.
823	operating systems	3527	<i>Software</i> for controlling the execution of <i>computer programs</i> and that may provide scheduling, debugging, input/output control, accounting, compilation, storage allocation, <i>data</i> management, and related services.
824	language	3527	A set of characters, conventions, and rules that is used for conveying information.

No.	Term	Source	Definition
825	requirement specification		A detailed brief of the user's requirements.
826	software specification		The conversion of the user's <i>requirement specification</i> into file structures, report lay-outs, input, amend and delete routines.
827	interactive		The ability to question and analyse information according to current needs. Communicating with the <i>computer</i> on the basis of action and response.

Section nine. Terms used in maintenance schedule optimization models

901	optimization		Finding the best procedure, policy or <i>maintenance</i> interval with respect to specified criteria
902	model		An approximate or exact mathematical analogue of the cybernetics of a real system made usually for the purpose of <i>optimization</i> of schedules.
903	life cycle cost model		A mathematical <i>model</i> designed to estimate the <i>life cycle cost</i> of materiel.
904	life cycle cost trade-off		The pursuit of a reduced, or at best minimized, <i>life cycle cost</i> by selection of appropriate design, operation and support characteristics.
905	optimized life cycle cost		The achievement of minimum <i>life cycle cost</i> by selection of optimum design, operation and support characteristics.
906	good-as-new, bad-as-old (g.a.n., b.a.o.)		<p>Terms used to describe a system after it has been repaired as to whether the <i>repair</i> has restored it to its original condition, or whether it still contains some used or worn parts.</p> <p>NOTE. Practical <i>maintenance</i> restores <i>items</i> to a condition which is neither <i>g.a.n.</i> nor <i>b.a.o.</i>, but <i>models</i> usually assume one or the other. <i>G.a.n.</i> implies that <i>preventive maintenance</i> is as good as a renewal and the 'item clock' is zeroed thereby. Under <i>b.a.o.</i> the <i>item</i> is restored as if the <i>failure</i> had not happened so that its propensity for future <i>failure</i> is the same as an unfailed <i>item</i> of the same age from new.</p>

Appendix A**Publications containing related terms**

The following publications define terms both similar and related to those defined in this standard.

BS 2564	Control chart technique when manufacturing to a specification, with special reference to articles machined to dimensional tolerances	BS 5191	Glossary of production planning and control terms
BS 3138	Glossary of terms used in work study and organization and methods (O & M)	BS 5233	Glossary of terms used in metrology
BS 3527	Glossary of terms used in data processing	BS 5643	Glossary of refrigeration, heating, ventilating and air conditioning terms
BS 4778	Glossary of terms used in quality assurance (including reliability and maintainability terms)	BS 5750	Quality systems
		BS 6143	Guide to the determination and use of quality related costs
		EOQC	Glossary of terms used in the management of quality — 5th edition — June 1981 (European Organization for Quality Control)

Index

Term	No.	Term	No.	Term	No.
A		E		L

This British Standard, having been prepared under the direction of the Quality Management and Statistics Standards Committee, was published under the authority of the Board of BSI and comes into effect on 30 March 1984.

© British Standards Institution, 1984

ISBN 0 580 13737 6

British Standards Institution

Incorporated by Royal Charter, BSI is the independent national body for the preparation of British Standards. It is the UK member of the International Organization for Standardization and UK sponsor of the British National Committee of the International Electrotechnical Commission.

Copyright

Users of British Standards are reminded that copyright subsists in all BSI publications. No part of this publication may be reproduced in any form without the prior permission in writing of BSI. This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols and size, type or grade designations. Enquiries should be addressed to the Publications Manager, British Standards Institution, Linford Wood,

Milton Keynes MK14 6LE. The number for telephone enquiries is 0908 320033 and for telex 825777.

Contract requirements

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Revision of British Standards

British Standards are revised, when necessary, by the issue either of amendments or of revised editions. It is important that users of British Standards should ascertain that they are in possession of the latest amendments or editions. Information on all BSI publications is in the *BSI Catalogue*, supplemented each month by *BSI News* which is available to subscribing members of the Institution and gives details of new publications, revisions, amendments and withdrawn standards. Any person who, when making use of a British Standard, encounters an inaccuracy or ambiguity, is requested to notify BSI without delay in order that the matter may be investigated and appropriate action taken.

The following BSI references relate to the work on this standard: Committee reference QMS/3/4 Draft for comment 82/60700 DC

Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Quality Management and Statistics Standards Committee (QMS/-) to Technical Committee QMS/3 upon which the following bodies were represented:

Electricity Supply Industry in England and Wales
HM Management and Personnel Office
Institute of Cost and Management Accountants
Institute of Purchasing and Supply
Institute of Quality Assurance
Institution of Structural Engineers
Co-opted member

The following bodies were also represented in the drafting of the standard, through subcommittees and panels:

Association of Supervisory and Executive Engineers
British Council of Maintenance Associations
British Internal Combustion Engine Manufacturers' Association
Cable and Wireless Limited
Chartered Institute of Building

Chartered Institution of Building Services
Coal Preparation Plant Association
Department of Health and Social Security
Department of the Environment (Property Services Agency)
Engineering Equipment and Materials Users' Association
Institute of Marine Engineers
Institute of Materials Handling
Institution of Civil Engineers
Institution of Electrical Engineers
Institution of Electronic and Radio Engineers
Institution of Mechanical Engineers
Institution of Municipal Engineers
Institution of Plant Engineers
Institution of Production Engineers
Ministry of Defence
National Coal Board
Production Engineering Research Association of Great Britain
Royal Institution of Chartered Surveyors
Royal Institution of Naval Architects
Society of Motor Manufacturers and Traders Limited
