PREFACE

It has been said that knowledge doubles every two years and computing power doubles every eighteen months. These dynamic changes will allow us to use technology in new ways as quickly as we can learn them. The interface of medicine and technology will help us provide better, safer care with each passing year as the amazing advancements of our scientist colleagues further delineate the pathophysiology and mechanisms of diseases. Our goal as the editors and authors of this textbook is not only to provide the classic, foundational knowledge we use every day, but to include recent advances in a readable, searchable, and concise text for medical learners as they move toward their careers as physicians and advanced practice providers.

We have once again provided updated information, including the advances that have occurred since the last edition. We believe this integration will help you investigate the common and classic pediatric disorders in a time-honored, logical format, helping you to both acquire knowledge and apply knowledge to your patients. The authors again include our colleagues who serve as clerkship directors so that medical students and advanced practice providers can gain the knowledge and skills necessary to succeed in caring for patients and in preparing for clerkship or in-service examinations.

We are honored to be part of the journey of the thousands of learners who rotate through pediatrics and of those who will become new providers of pediatric care in the years to come.

Karen J. Marcdante, MD

Robert M. Kliegman, MD

ACKNOWLEDGMENTS

The editors profusely thank James Merritt, Jennifer Shreiner, Amanda Mincher, and their team for their assistance and attention to detail. We also again thank our colleague, Carolyn Redman, whose prompting, organizing, and overseeing of the process helped us create this new edition. Finally we thank our spouses for their patient support throughout the process.
