

Recognizing phishing websites based on a bayesian combiner

ijnaa.semnan.ac.ir - O Rahmani Seryasat, S Ahmadi... - ... Journal of Nonlinear ..., 2021

Phishing is a social engineering technique used to deceive users, which means trying to obtain confidential information such as username, password or bank account information. One of the most important challenges on the Internet today is the risk of phishing attack and Internet scams. These attacks cost the United States billions of dollars a year. Therefore, researchers have made great efforts to identify and combat such attacks. Accordingly, the present study aims to evaluate the methods of identifying phishing websites. This research is ...
