QUESTION 79
What command would rebuild the ld.so.cache file?

A. ldd
B. ldconfig
C. ld.so.cache -rebuild
D. ld

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:
ldconfig creates the necessary links and cache to the most recent shared libraries found in the directories specified on the command line, in the file /etc/ld.so.conf, and in the trusted directories (/lib and /usr/lib). The cache is used by the run-time linker, ld.so or ld-linux.so. ldconfig checks the header and file names of the libraries it encounters when determining which versions should have their links updated.

QUESTION 80

On a debian system which of the following would build a boot disk?

A. mkboot /dev/floppy
B. makeboot --device /dev/fd0 2.4.18-12
C. mkboot --device /dev/fd0 2.4.18-12
D. mkboot /boot/vmlinux-2.4.18-12
E. mkbootdisk /boot/vmlinux-2.4.18-12

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:
mkboot creates a boot floppy appropriate for the running system. The boot disk is entirely selfcontained, and includes an initial ramdisk image which loads any necessary SCSI modules for the system. The created boot disk looks for the root filesystem on the device suggested by /etc/fstab. The only required argument is the kernel version to put onto the boot floppy.
Syntax:
mkbootdisk [options] kernel version.
Bydefault mkboot creates the boot disk on first floppy device. If you want to specify the device use the --device option. In debian you should specify the kernel filename which resides on /boot.

What command would cause a print job to be printed next regardless of its current position in the queue.

A. lpc topq
B. lpc -t
C. lpq -t
D. lpc move
E. lpq --next

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
The lpc command is used to examine and control the print server operation. The lpc status command displays the administrative status of a print queue. The lpd program caches status and job information in order to improve performance. The lpc flush command will flush the cached information and cause the server to regenerate it. The lpc enable and lpc disable commands enable or disable spooling to the print queue, and the lpc stop and lpc start commands stop and start printing (or transfers) of jobs in the print queue. The lpc topq command can be used to put a job (or jobs) at the head of the spool queue. This command is very useful when some job requires priority service. You can select the job by using the job number or the job ID.

There is one more step needed for the build process, however. You have created the kernel, but now you need to create all the loadable modules if you have them configured. Be aware that typical distribution kernels tend to have almost every feature installed, plus a few others for good

measure. These can typically take an hour or so to build on our Athlon XP1800. The stock kernels are somewhat leaner by default and take, on average, 25 minutes to compile. To build the modules we run:
$ make modules
If you forget to enter make modules command, you will get that message.

Explanation:
lpr command is used to send the printing job. If printer is not specified then it will send printing job to default printer. To specify the printer name should use the -P option.
Example:
lpr -Pprintername -#numberofcopies filename
-# or -K specify the number of copies.

QUESTION 137
The hosts.lpd file provides:

A. A list of network printer IP addresses.
B. A listening of printers available on the local network.
C. A listening of computers that have printer (lpd) daemons running.

D. A listening of hosts allowed to use printers on the local machine.

E. A list of hosts on the local network that are not allowed access to printers attached to the local machine.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:
The /etc/hosts.lpd file defines which remote systems are permitted to print on the local system. Only that hosts specified in /etc/hosts.lpd can send the printing job.

Which of the following correctly describe the relationship between depmod and modprobe?

A. depmod creates a dependency file for use by modprobe

B. modprobe creates a dependency file for use by depmod

C. they have no relationship

D. they can replace each other

Correct Answer: A

Section: (none)
Explanation

Explanation/Reference:
Explanation:
Depmod creates a "Makefile"-like dependency file, based on the symbols it finds in the set of modules mentioned on the command line or from the directories specified in the configuration file. This dependency file is later used by modprobe to automatically load the correct module or stack of modules.

QUESTION 150
The normal use of depmod is to include which of the following lines in one of the files in /etc/rc.d so the correct module dependencies will be available after booting the system?

A. /sbin/depmod -a
B. /sbin/depmod -p
C. /sbin/depmod -r
D. /sbin/depmod -c

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
As described by http://www. oreillynet.com/linux/cmd/d/depmod.html, depmod creates a dependency file for the modules given on the command line. This dependency file can be used by modprobe to automatically load the relevant modules. The normal use of depmod is to include the line /sbin/depmod -a in one of the files in /etc/rc.d so the correct module dependencies will be available after booting the system.

QUESTION 161
What command should you use to unload loadable modules from the running kernel?

A. rmmod
B. remove -mod
C. delmod
D. unload module

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Rmmod unloads loadable modules from the running kernel. Rmmod tries to unload a set of modules from the kernel, with the restriction that they are not in use and that they are not referred to by other modules. If more than one module is named on the command line, the modules will be removed simultansously. This supports unloading of stacked modules.

QUESTION 162
What command option of rmmod specifies that all outputs be sent to syslog?

A. -a
B. -i
C. -s
D. -d

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Rmmod unloads loadable modules from the running kernel. -s: Output everything to syslog(3) instead of the terminal.
Syntax:
Rmmod -s or --syslog modulename

QUESTION 163
What utility examines the object file module_file associated with a kernel module and displays any information that it can glean?

A. modinfo

B. modprobe

C. insmod

D. depmod

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
modinfo extracts information the Linux Kernel modules given on the command line. If the module name is not a filename, then the /lib/modules/version directory is searched, as done by modprobe Syntax: modinfo modulename or filename
Example:
modinfo ext3
Sample output filename: /lib/modules/2.6.9-5.EL/kernel/fs/ext3/ext3.ko author:
Remy Card, Stephen Tweedie, Andrew Morton, Andreas Dilger, Theodore Ts'o and othersdescription:

QUESTION 165
LPI 117-102: Practice Exam

What option of modprobe specifies the loading of all matching modules instead of stopping after the first successful loading?

A. -a

B. -f

C. -c

D. -e

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
-a, --all: Load all matching modules instead of stopping after the first successful loading.

QUESTION 166
What option of modprobe allows you to set 'autoclean' on the loaded modules?

A. -k
B. -d
C. -c
D. -e

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
-k, --autoclean: Set 'autoclean' on loaded modules. Used by the kernel when it calls on modprobe to satisfy a missing feature (supplied as a module). The -q option is implied by -k. These options will automatically be sent to insmod.

QUESTION 167
Modprobe can be used to load (choose all that apply):

A. a single module
B. a stack of dependent modules
C. all modules that are marked with a specified tag
D. None of the choices

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Modprobe is used to load a single module, a stack of dependent modules, or all modules that are marked with a specified tag.

QUESTION 168
Modprobe will automatically load all base modules needed in the module stack as described by its dependency file. What file is this?

A. modules.dep
B. modprobe.dep
C. module.dep
D. modep.dep

Correct Answer: A
Section: (none)

Explanation

Explanation/Reference:
Explanation:
depmod creates a list of module dependencies, by reading each module under /lib/modules/version and determining what symbols it exports, and what symbols it needs. By default this list is written to modules.dep in the same directory. The normal use of depmod is to include the line /sbin/depmod -a in one of the files in /etc/rc.d so the correct module dependencies will be available after booting the system. depmod -e prints a list of all unresolved symbols. When you tried to load the modules using modprobe command it checks the modules.dep file generated by depmod command to identify the dependencies and load all dependencies as well.

QUESTION 169
Which of the following regarding user account configuration is true (choose all that apply):

A. username is case-sensitive
B. password is case-sensitive
C. username is case-insensitive
D. password is case-insensitive

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Please note that everything should be entered in lowercase, except for the full name of the user which can be entered in a "pleasing format" (eg. Joe Smith) and the password. Case is sensitive, so inform your user(s) they must use identical case when entering their username and password.

Is Linux Purely Monolithic?

Linux by and large is monolithic. However, Linux permits modules, a system whereby certain parts of the kernel may be loaded at runtime. Linux modules are reminiscent of micro-kernel architectures, but Linux really remains basically a monolithic architecture.

QUESTION 174
Which of the following brings up a user friendly GUI interface?

A. make xconfig

B. make menuconfig

C. make config

D. make compile

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:

Explanation:
The "make xconfig" or "make menuconfig" brings up a user friendly GUI interface. And "make config" brings up command-line console mode interface. You can load the configuration file from /usr/src/linux/.config (dot config file. Note the dot before config).

QUESTION 175
Which bootloader can lie to Windows and make Windows believe that it's installed on the first partition even if it's not?

A. GRUB

B. XLoad

C. LILO

D. FILO

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
GRUB differs from bootloaders such as LILO in that it can lie to Windows and make Windows believe that it's installed on the first partition even if it's not. So you can keep your current Linux system where it is and install Windows on the side.

QUESTION 176

QUESTION 178
Which of the following insures that all of the dependencies, such as the include files, are in place?

A. make dep
B. make clean
C. make_dep
D. make_install

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
When the configure script ends, it also tells you to `make dep' and (possibly) `clean'. So, do the `make dep'.
This insures that all of the dependencies, such the include files, are in place. It does not take long, unless
your computer is fairly slow to begin with. For older versions of the kernel, when finished, you should do a
`make clean'. This removes all of the object files and some other things that an old version leaves behind. In
any case, do not forget this step before attempting to recompile a kernel.

QUESTION 180
What command will compile the Linux kernel and leave a file in arch/i386/boot called bzImage?

A. make bzImage
B. make compile
C. make Image
D. make bzdisk

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
LPI 117-102: Practice Exam

Explanation:
After depending and cleaning, you may now `make bzImage' or `make bzdisk' (this is the part that takes a long time.). `make bzImage' will compile the kernel, and leave a file in arch/i386/boot called `bzImage' (among other things). This is the new compressed kernel. `make bzdisk' does the same thing, but also places the new bzImage on a floppy disk which you hopefully put in drive ``A:''. `bzdisk' is fairly handy for testing new kernels; if it bombs (or just doesn't work right), just remove the floppy and boot with your old kernel. It can also be a handy way to boot if you accidentally remove your kernel (or something equally as dreadful).

QUESTION 181
What command will compile the Linux kernel and leave a file called bzImage in the floppy disk?

A. make bzImage

QUESTION 182
Which of the following commands will attempt to configure the kernel from an old configuration file and run through the make config process for you?

A. make oldconfig
B. make newconfig
C. make clean
D. None of the choices

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Make oldconfig' will attempt to configure the kernel from an old configuration file; it will run hrough the `make config' process for you. If you haven't ever compiled a kernel before or don't have an old config file, then you probably shouldn't do this, as you will most likely want to change the default configuration.

QUESTION 183
Incremental upgrades of the kernel are distributed as:

A. patches.
B. fixes.
C. hotfixes.
D. service packs.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Incremental upgrades of the kernel are distributed as patches. For example, if you have version 1.1.45, and you notice that there's a `patch46.gz' out there for it, it means you can upgrade to version 1.1.46 through application of the patch. You might want to make a backup of the source tree first (`make clean' and then `cd /usr/src; tar zcvf old-tree.tar.gz linux' will make a compressed tar archive for you.).

QUESTION 184
Loadable kernel modules can (choose all that apply):

A. save memory
B. ease configuration
C. include filesystems
D. include ethernet card drivers

Correct Answer: ABCD
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Loadable kernel modules can save memory and ease configuration. The scope of modules has grown to include filesystems, ethernet card drivers, tape drivers, printer drivers, and more.

QUESTION 185
The command "make config" requires bash.

LPI 117-102: Practice Exam

A. true
B. false

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:
The command `make config' while in /usr/src/linux starts a configure script which asks you many questions. It requires bash, so verify that bash is /bin/bash, /bin/sh, or $BASH.

QUESTION 186

Upgrading a kernel involves which of the following tasks (choose all that apply):

A. configuring the desired modules
B. compiling the kernel and modules
C. installing the kernel image
D. conducting a system reboot

Correct Answer: ABCD
Section: (none)
Explanation

Explanation/Reference:
Explanation:
Upgrading the kernel involves configuring desired modules, compiling the kernel and modules, and finally installing the kernel image. This is followed by a system reboot (with fingers crossed!) to load the new kernel. All of this is documented in the ``README'' file which comes with each kernel package. Further information can be found in the ``Documentation/'' subdirectory. A particularly helpful file there is ``Configure.help'' which contains detailed information on the available kernel compile options and modules.

Explanation

Explanation/Reference:
Explanation:
When using this account it is crucial to be as careful as possible. The "root" account has no security restrictions imposed upon it. This means it is easy to perform administrative duties without hassle. However, the system assumes you know what you are doing, and will do exactly what you request -- no questions asked. Therefore it is easy, with a mistyped command, to wipe out crucial system files.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:
ActualTests.com
There are 65535 possible ports officially recognized.
Note:
TCP uses the notion of port numbers to identify sending and receiving applications. Each side of a TCP connection has an associated 16-bit unsigned port number assigned to the sending or receiving application. Ports are categorized into three basic categories: well known, registered and dynamic/private. The well known ports are assigned by the Internet Assigned Numbers uthority (IANA) and are typically used by system-level or root processes. Well known applications running as servers and passively listening for connections typically use these ports. Some examples include: FTP (21), TELNET (23), SMTP (25) and HTTP (80). Registered ports are typically used by end user applications as ephemeral source ports when contacting servers, but they can also identify named services that have been registered by a third party. Dynamic/private ports can also be used by end user applications, but are less commonly so. Dynamic/private ports do not contain any meaning outside of any particular TCP connection.
