

# **Physiology of Respiration**

**Part 4**

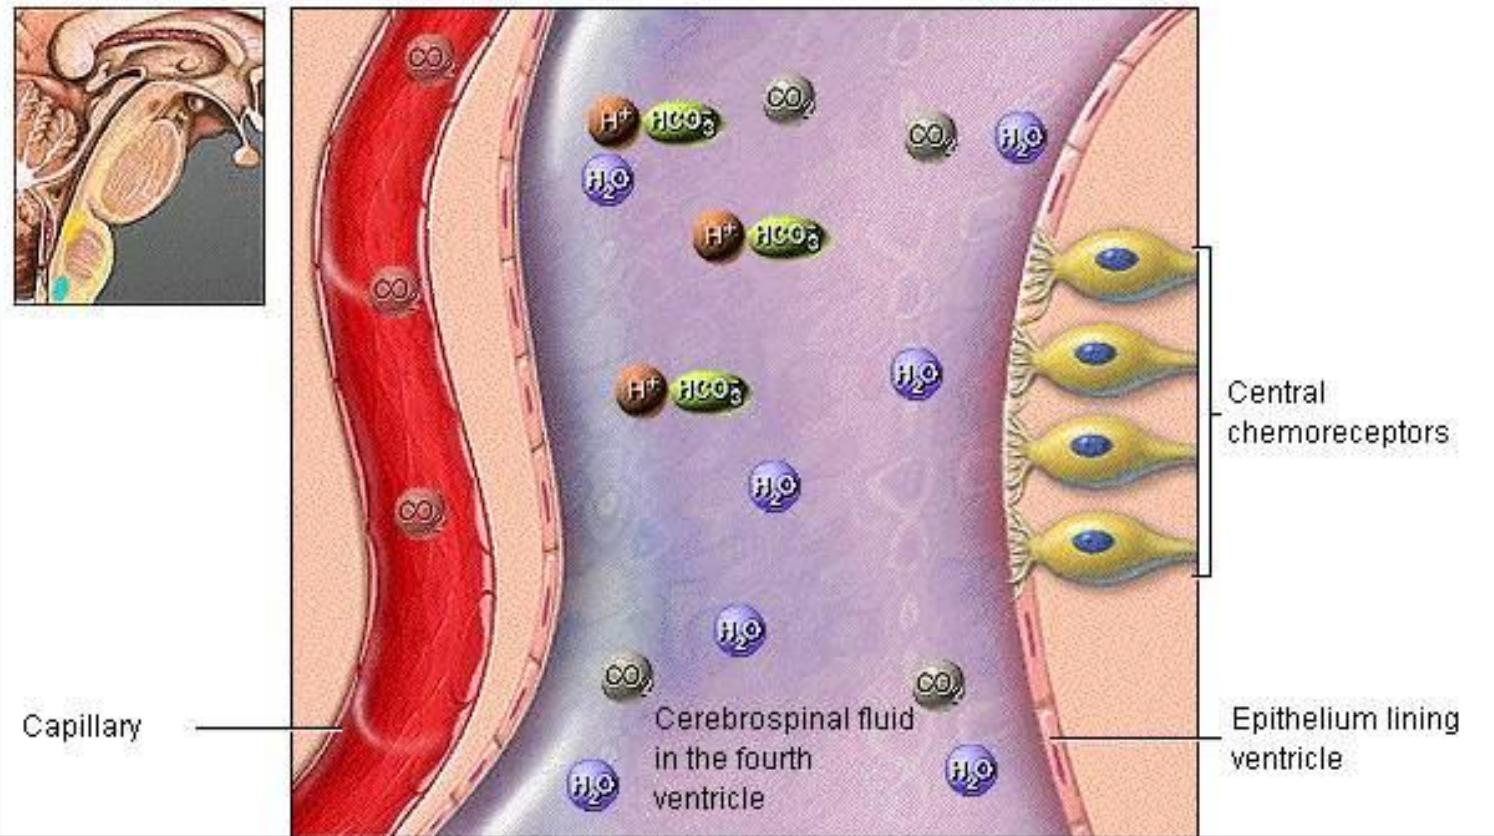

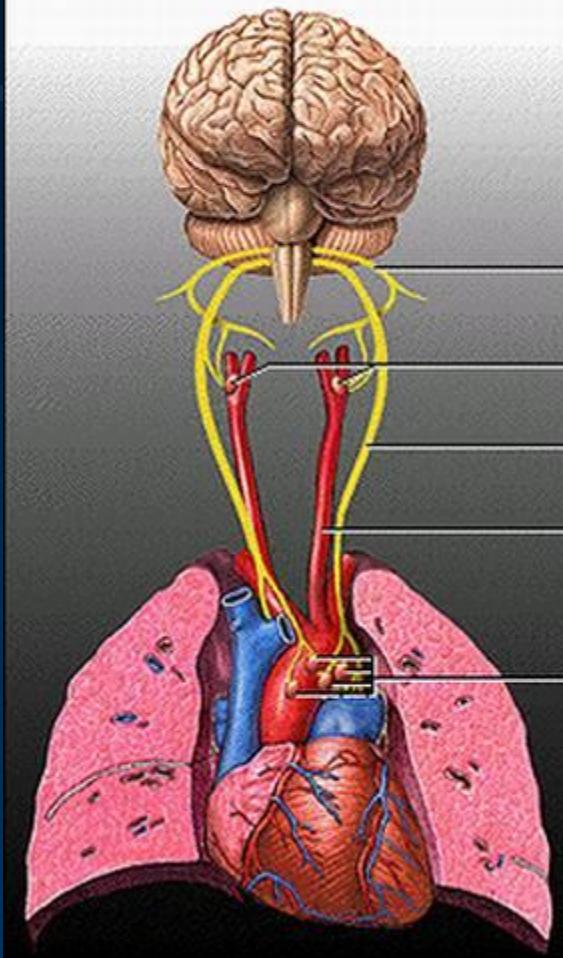

# Control

## CENTRAL CHEMORECEPTORS: EFFECT OF PCO<sub>2</sub>

## LOCATION OF CHEMORECEPTORS

Glossopharyngeal  
nerve (IX)

Carotid bodies

Vagus nerve (X)

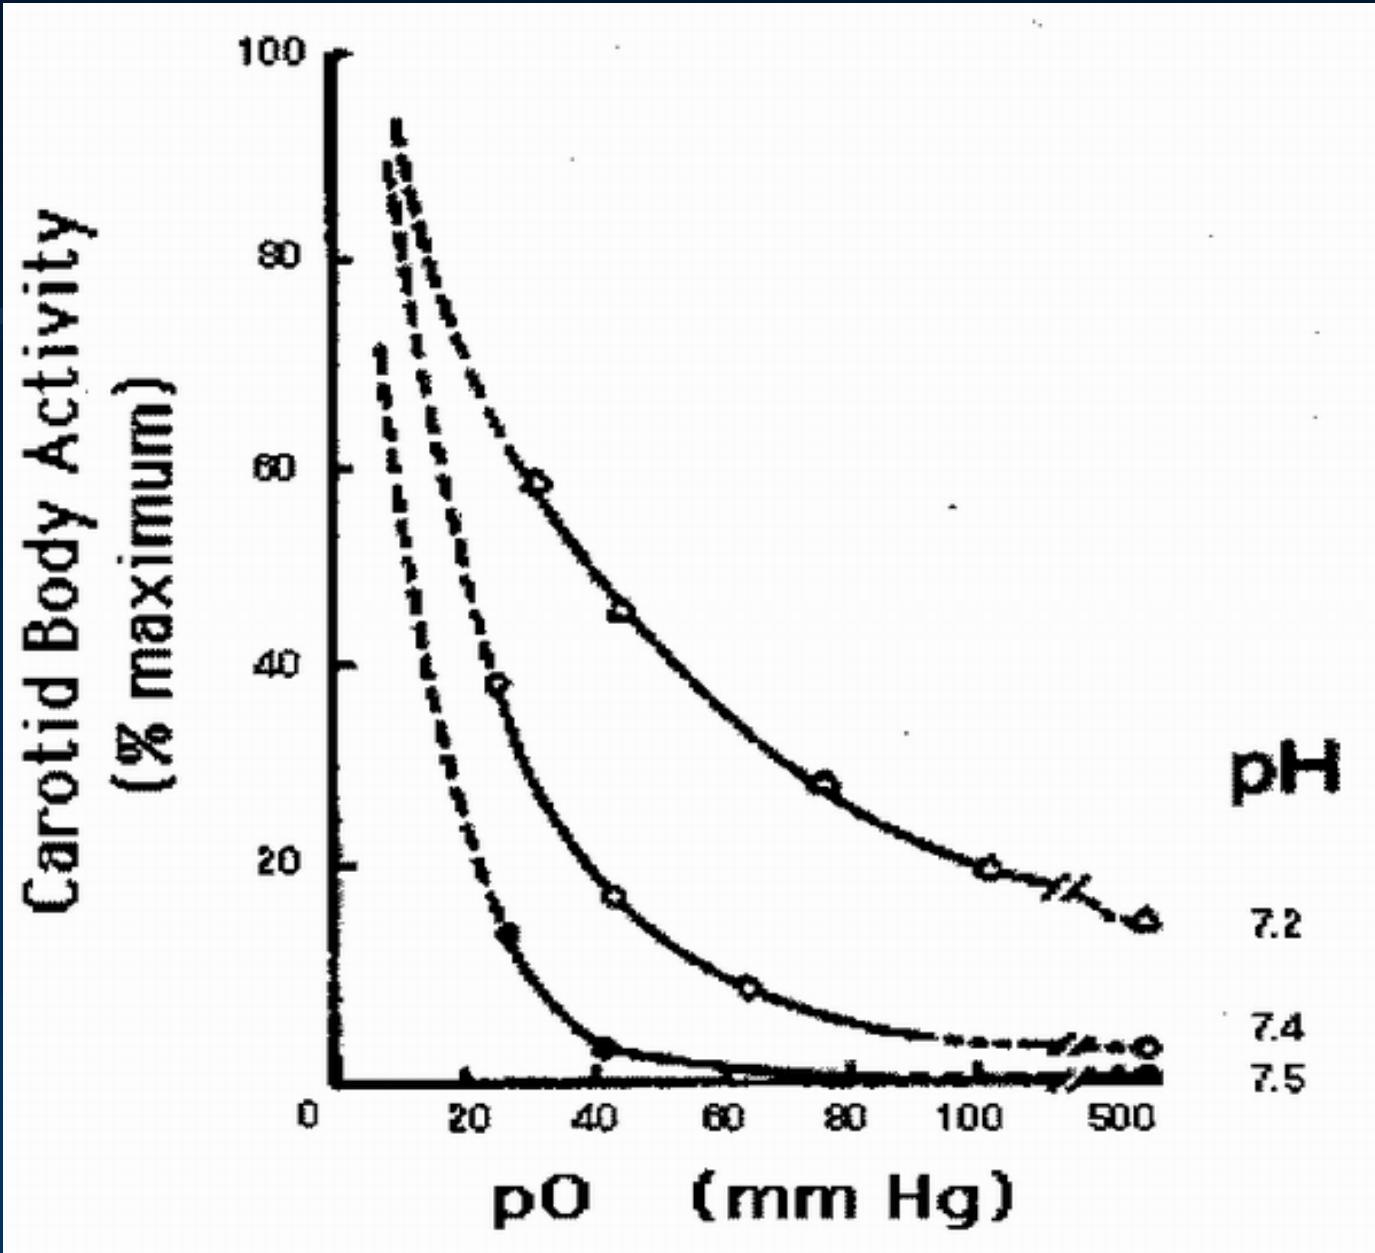

Common carotid  
artery

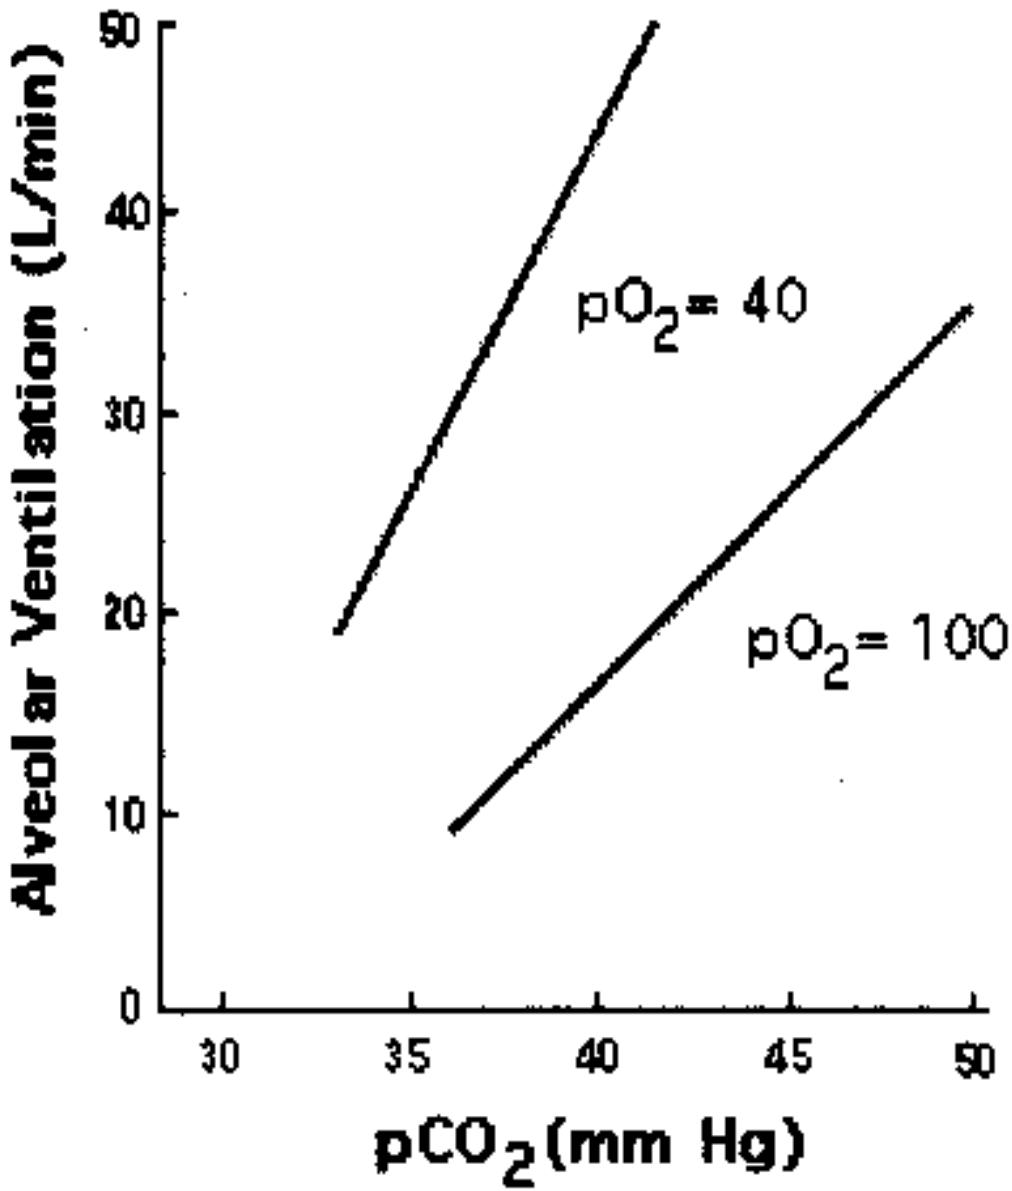

Aortic bodies in  
aortic arch

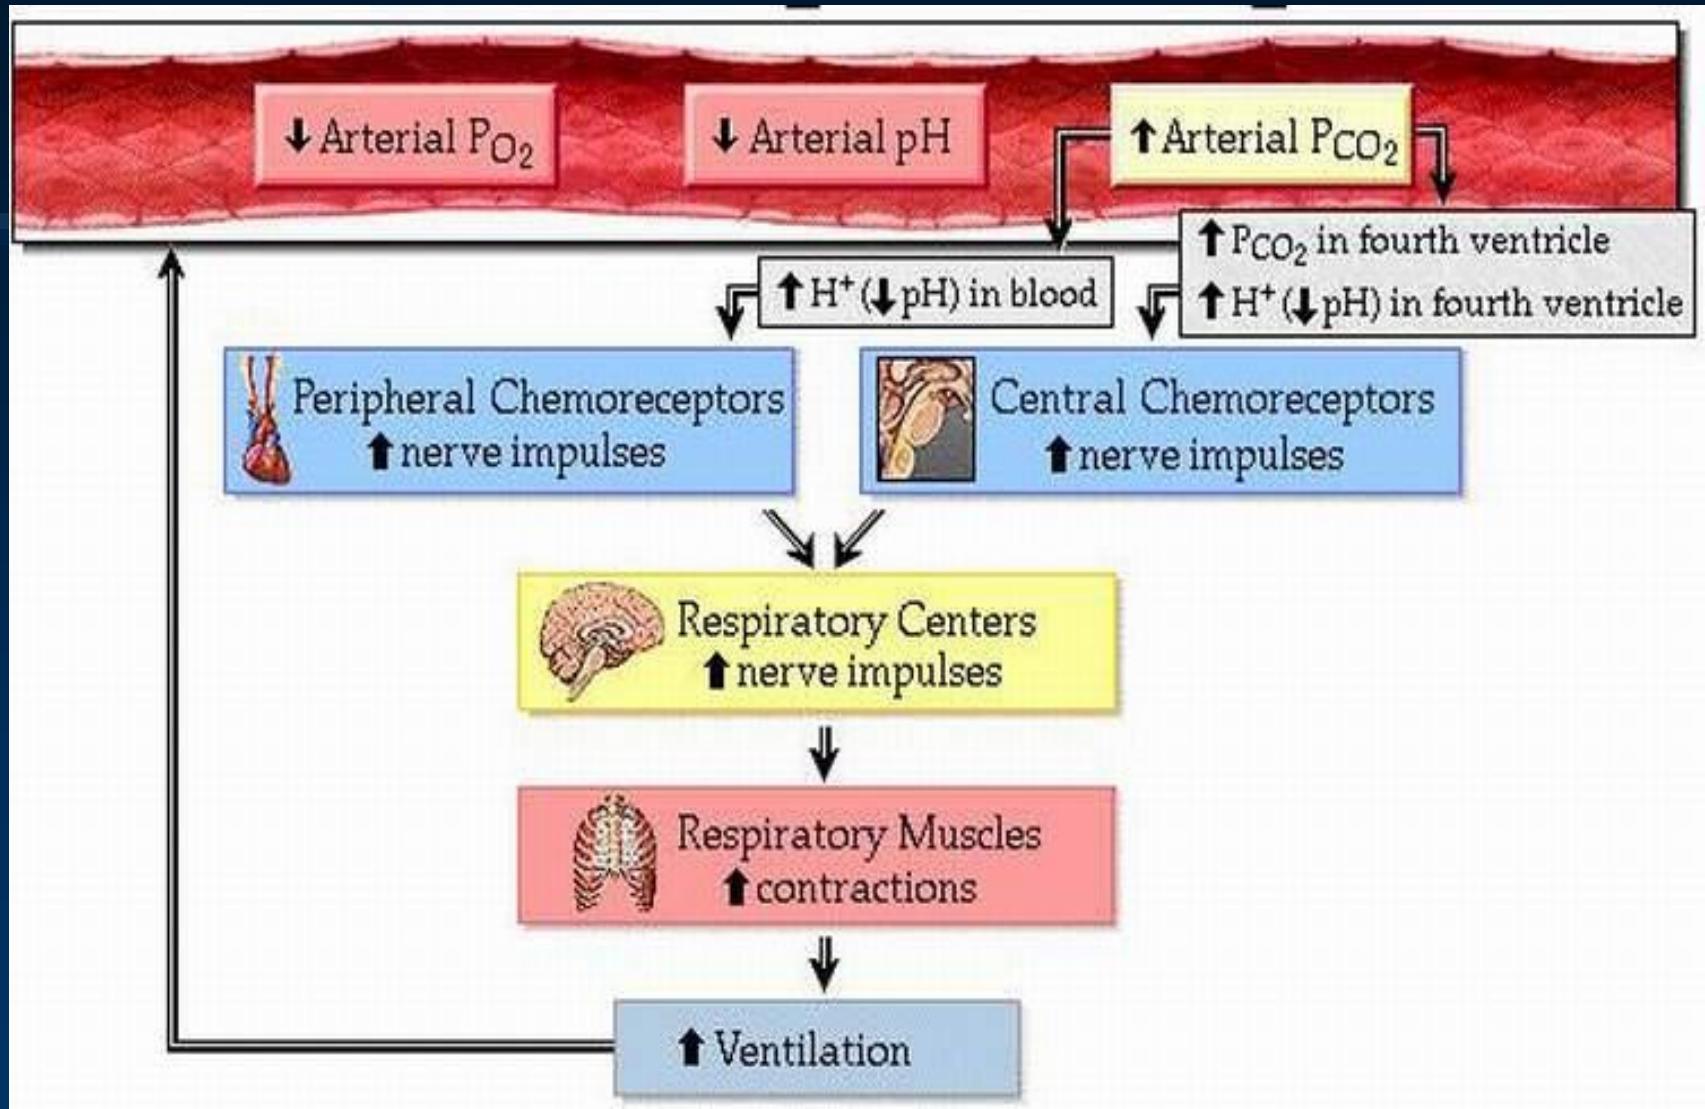

The basic rhythm of breathing is modified by input from the central and peripheral **chemoreceptors**. They respond to changes in the  $\text{PCO}_2$ , pH, and  $\text{PO}_2$  of arterial blood, the most important factors altering ventilation.

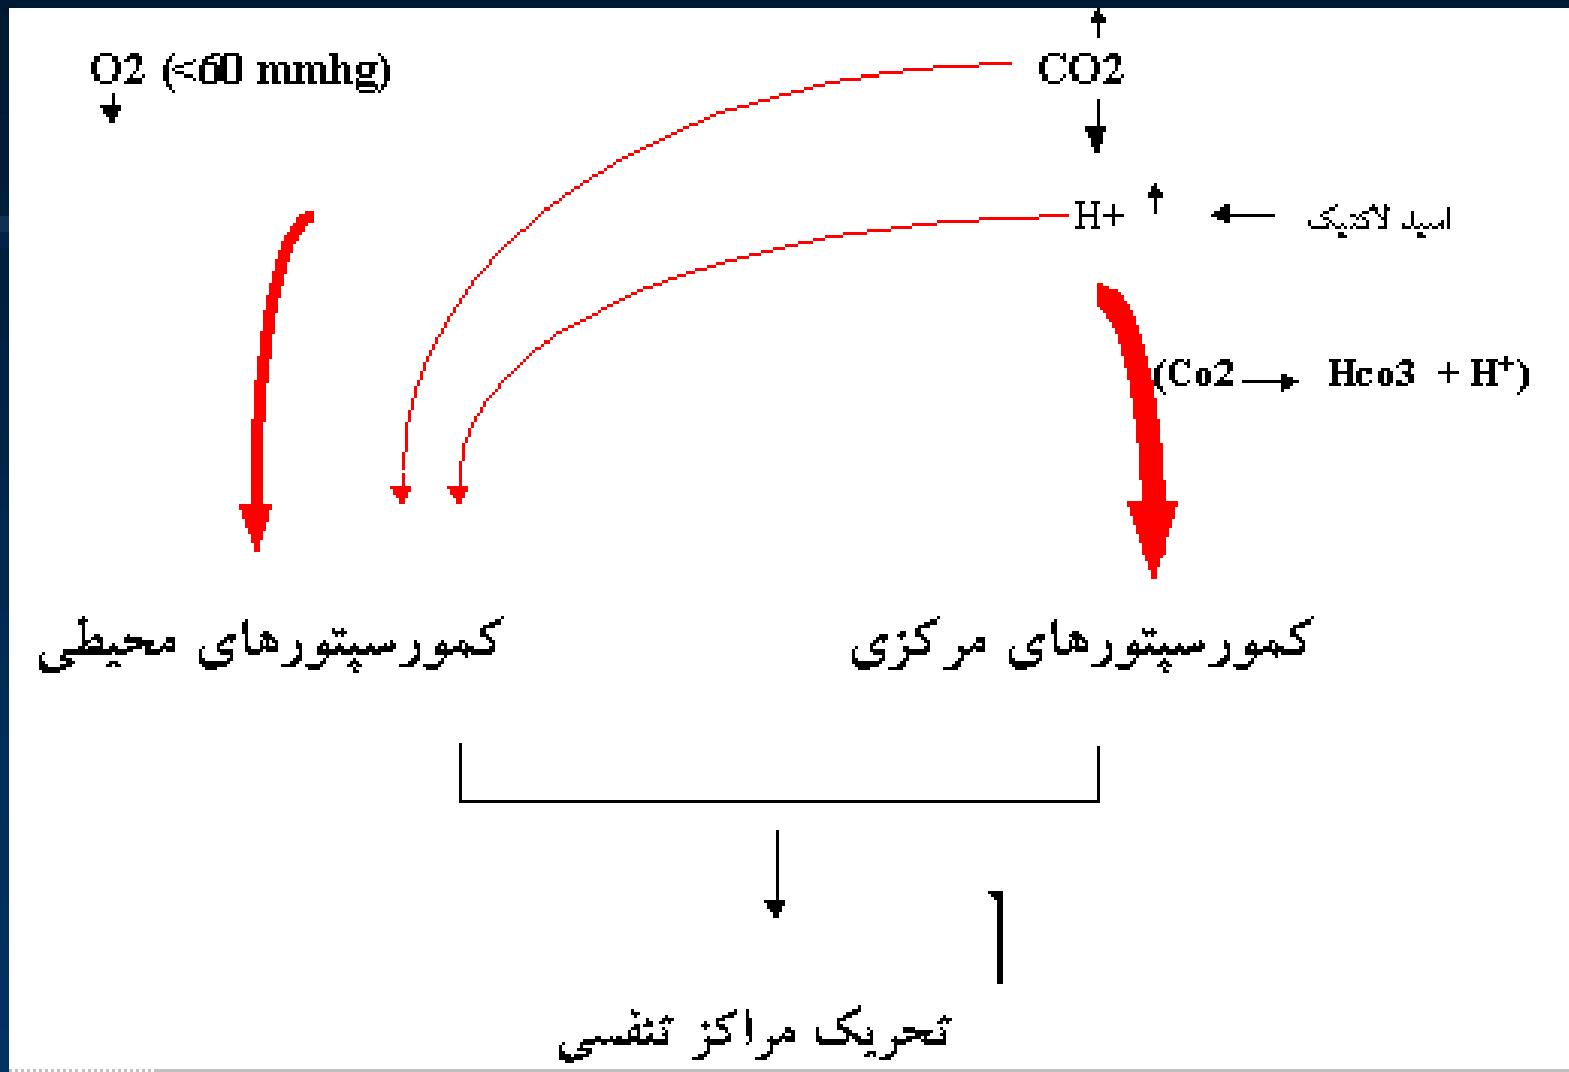

Central  
chemoreceptors

Peripheral  
chemoreceptors

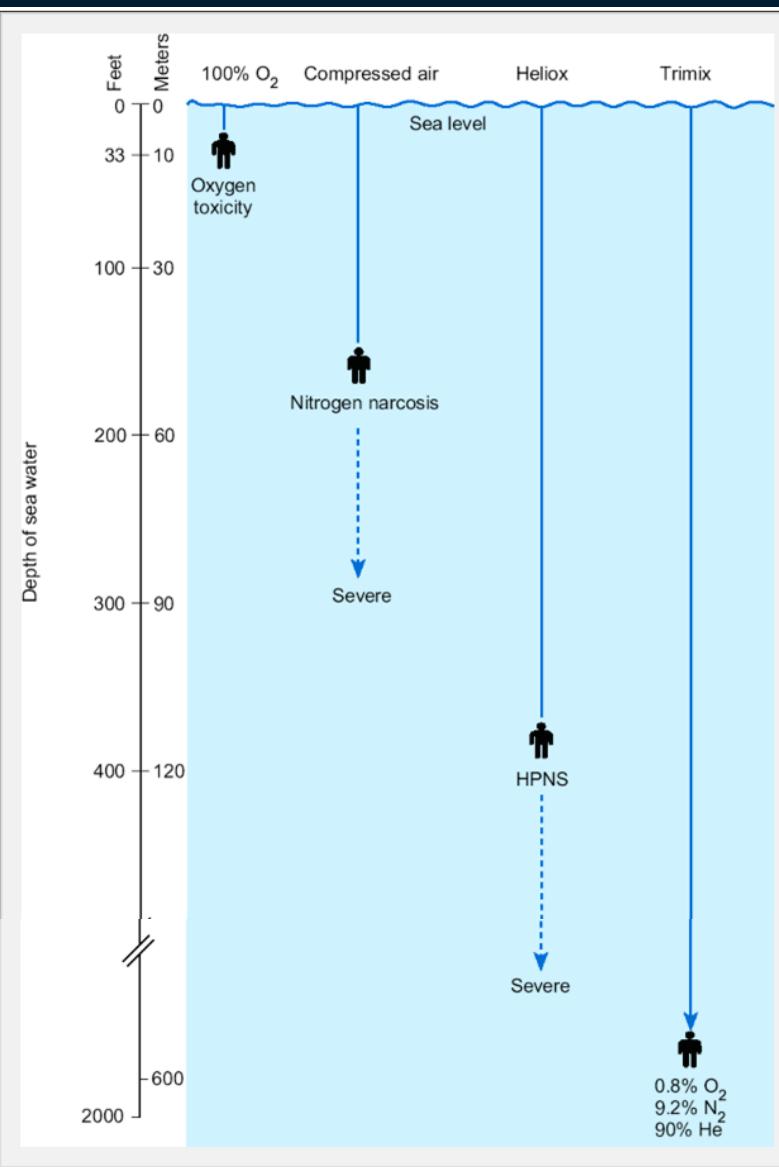

# فاکتورهای جانبی

## Inflation reflex =Hering-Breuer

- استرچ رسپتورهای پلور احشایی و راههای هوایی بزرگ در دم بسیار عمیق از طریق واگ باعث مهار تنفس کنترول ارادی - مراکز کم. رسپتوری بر آن تفوق دارند.
- درد و مسائل روحی
- دود و غبار - عطسه و سرفه
- ورزش سنگین - دم عمیق تر و تعداد کمتر تنفس یادگیری
- گیرنده های عضلات و مفاصل
- اپینفرین و نور اپینفرین و اسید لاکتیک خون

# Diving

# Decompression Sickness

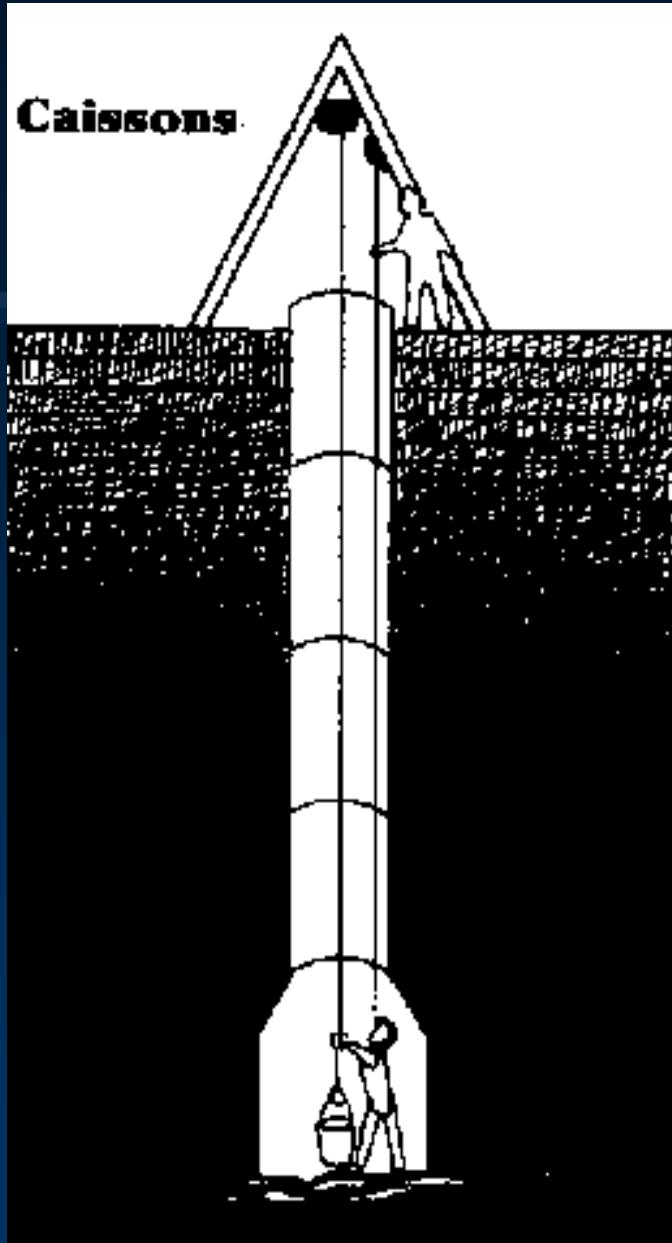

**DCS**

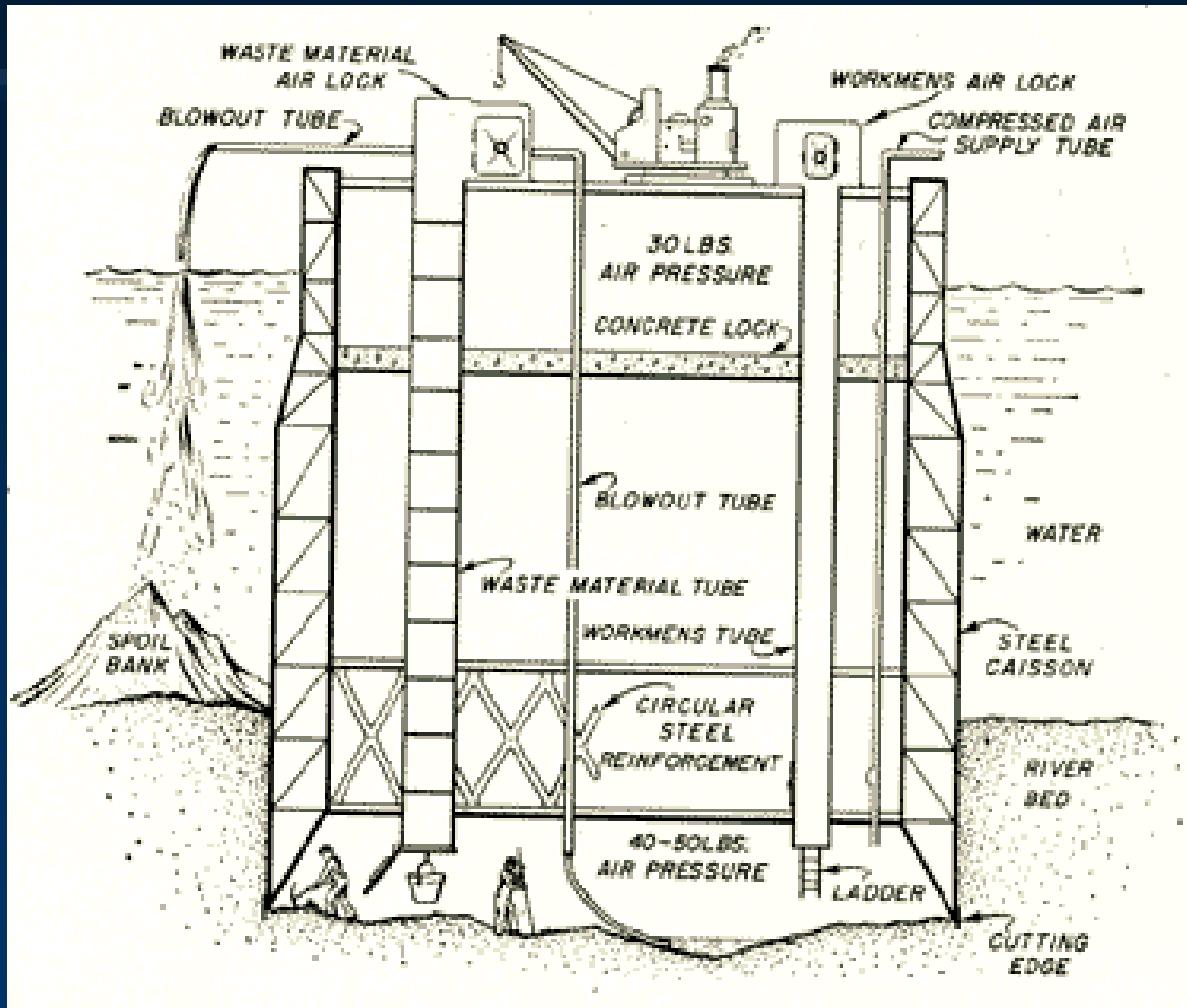

can happen in these situations:

- A diver **ascends quickly** from a dive or does not carry out decompression stops after a long or deep dive.
- An **unpressurized aircraft** flies upwards.
- The **cabin pressurization system** of a high-flying aircraft fails.
- **Divers flying** in any aircraft shortly after diving
- A worker comes out of a **pressurized caisson** or out of a mine, which has been pressurized to keep water out

# caisson sickness

- Roebling
- . . . He went to Europe to study engineering and especially **pneumatic caissons**. After his father's death he directed the construction of the Brooklyn Bridge. Because of continuous underground work he was stricken (1872) with decompression sickness (**caisson disease**), but despite his invalidism he directed the project until the bridge was opened to traffic (1883).

- Most bridge foundations over the sea are caissons that are embedded into the river-bed (or ocean floor) until a suitable firm stratum is encountered. A caisson foundation, in simple words, is like a can (although it need not be circular!). It is a watertight chamber that facilitates the operation of construction equipment by workers within it.

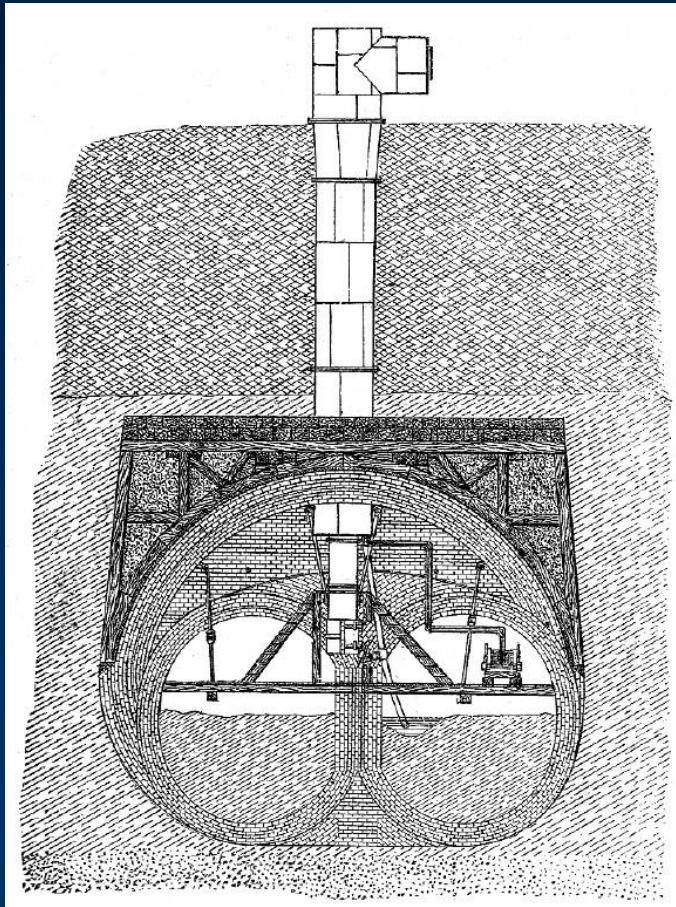

The workers operate construction equipment and excavate the soil within the caisson walls thus sinking the caisson into the river-bed (or ocean floor). Compressed air is pumped into the caisson and regulated to ensure that the caisson remains stable and soil/mud/water do not rush in through the bottom.

**Chemical Classification of Representative Organophosphorus Compounds of Particular Pharmacological or Toxicological Interest**

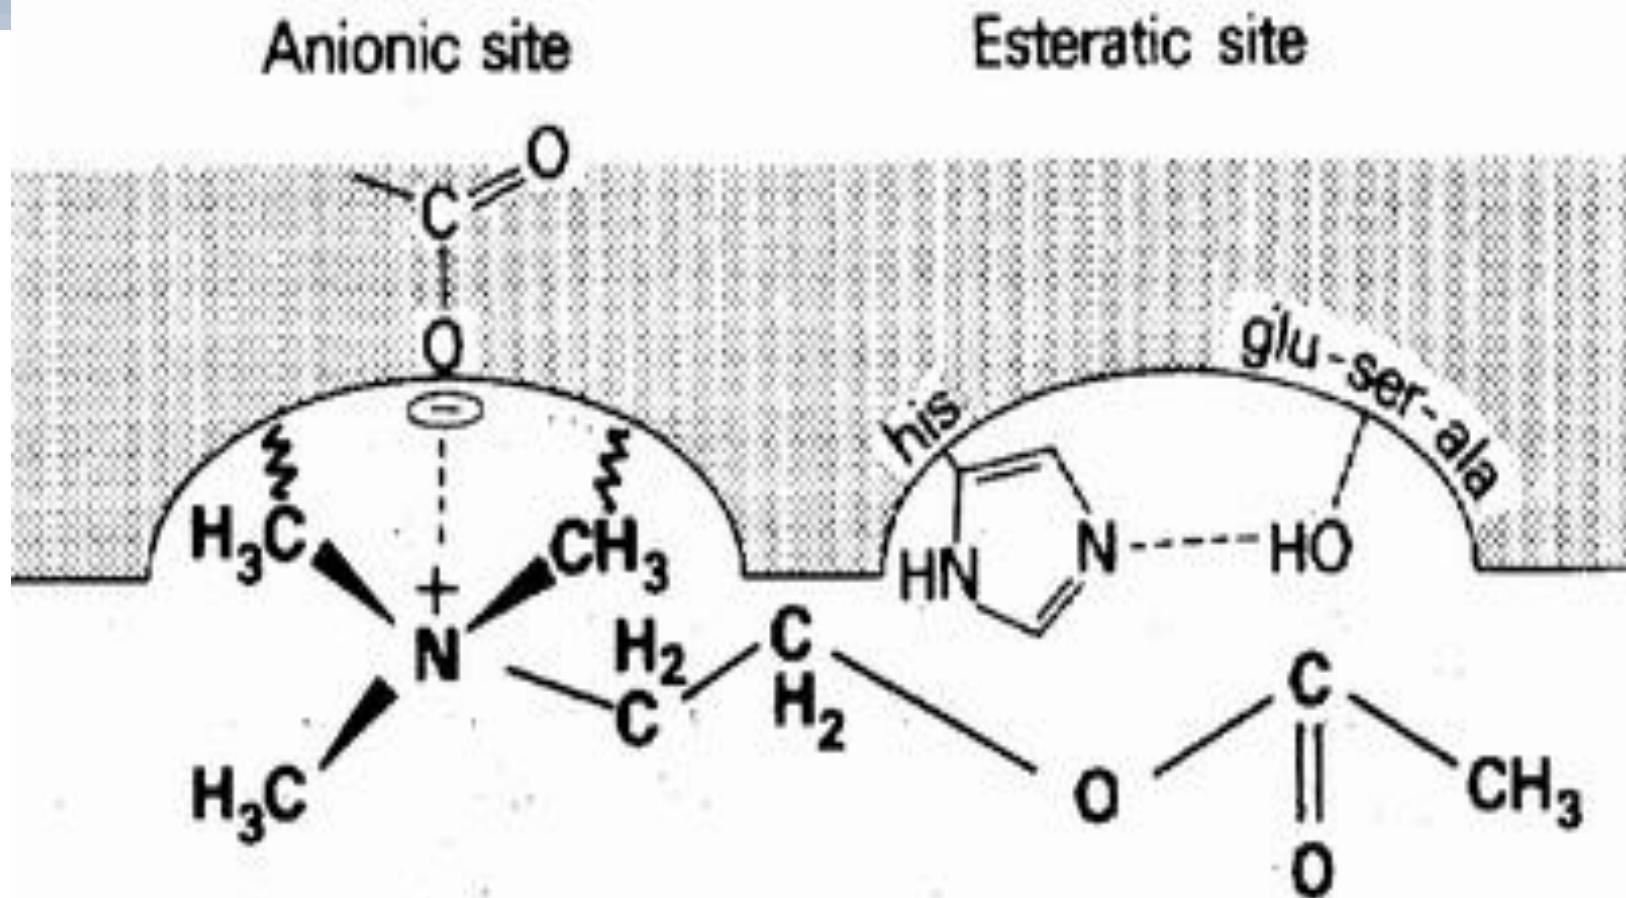

GROUP	STRUCTURAL FORMULA	COMMON, CHEMICAL, AND OTHER NAMES	COMMENTS	General formula (Schrader, 1952):
				$\begin{array}{c} R_1 \\   \\ P=O \\   \\ R_2 \\   \\ X \end{array}$
<b>A</b>	$\begin{array}{c} \text{OC}_2\text{H}_5\text{O} \\   \\ \text{P}=\text{O} \\   \\ \text{F} \end{array}$	DFP; Isofluorophosphate (see trade names in text); diisopropyl fluorophosphate	Potent, irreversible inactivator	
	$\begin{array}{c} (\text{CH}_3)_2\text{N} \\   \\ \text{P}=\text{O} \\   \\ \text{CN} \end{array}$	Tabun Ethyl N-dimethylphosphoramido-cyanide	Extremely toxic "nerve gas"	
	$\begin{array}{c} \text{OC}_2\text{H}_5\text{O} \\   \\ \text{P}=\text{O} \\   \\ \text{F} \\   \\ \text{CH}_3 \end{array}$	Sarin (GB) <i>N</i> -propyl methylphosphonofluoridate	Extremely toxic "nerve gas"	
	$\begin{array}{c} \text{CH}_3\text{CH}_2 \\   \\ \text{CH}_3-\text{C}-\text{CH}_2-\text{O}-\text{P}=\text{O} \\   \\ \text{CH}_3 \end{array}$	Soman Pinacolyl methylphosphonofluoridate	Extremely toxic "nerve gas"	
<b>B</b>	$\begin{array}{c} \text{C}_2\text{H}_5\text{O} \\   \\ \text{P}=\text{O} \\   \\ \text{O}-\text{C}_6\text{H}_4-\text{NO}_2 \end{array}$	Paraoxon (paroxon), E 600 O,O-Diethyl O-(4-nitrophenyl)-phosphate	Active metabolite of parathion	
<b>C</b>	$\begin{array}{c} \text{C}_2\text{H}_5\text{O} \\   \\ \text{P}=\text{S} \\   \\ \text{O}-\text{C}_6\text{H}_4-\text{NO}_2 \end{array}$	Parathion (see trade names in text) O,O-Diethyl O-(4-nitrophenyl)-phosphorothioate	Employed as agricultural insecticide, resulting in numerous cases of accidental poisoning	
	$\begin{array}{c} \text{CH}_3\text{O} \\   \\ \text{P}=\text{S} \\   \\ \text{O}-\text{C}_6\text{H}_4-\text{CH}_3 \\   \\ \text{S}-\text{CH}_3 \end{array}$	Renthion O,O-Dimethyl O-4-methylthio- <i>m</i> -tolyl phosphorothioate	Insecticide with high lipid solubility; agricultural use	
	$\begin{array}{c} \text{CH}_3\text{O} \\   \\ \text{P}=\text{S} \\   \\ \text{O}-\text{C}_6\text{H}_4-\text{CH}_3 \\   \\ \text{CH}_3 \end{array}$	Dimpylate, Diazinon O,O-Diethyl 2-isopropyl-6-methyl-4-pyrimidinyl phosphorothioate	Insecticide in wide use for gardening and agriculture	
	$\begin{array}{c} \text{CH}_3\text{O} \\   \\ \text{P}=\text{S} \\   \\ \text{O}-\text{C}_6\text{H}_4-\text{CH}_3 \\   \\ \text{CH}_2\text{COOC}_2\text{H}_5 \end{array}$	Malathion O,O-Dimethyl S-(1,2-dicarboxyethyl) phosphorothioate	Widely employed insecticide of greater safety than parathion or other agents because of rapid detoxification by higher organisms	
<b>D</b>	$\begin{array}{c} \text{C}_2\text{H}_5\text{O} \\   \\ \text{P}=\text{O} \\   \\ \text{OOC}_2\text{H}_5 \end{array}$	TEPP Thiophosgene mustard	Early insecticide	

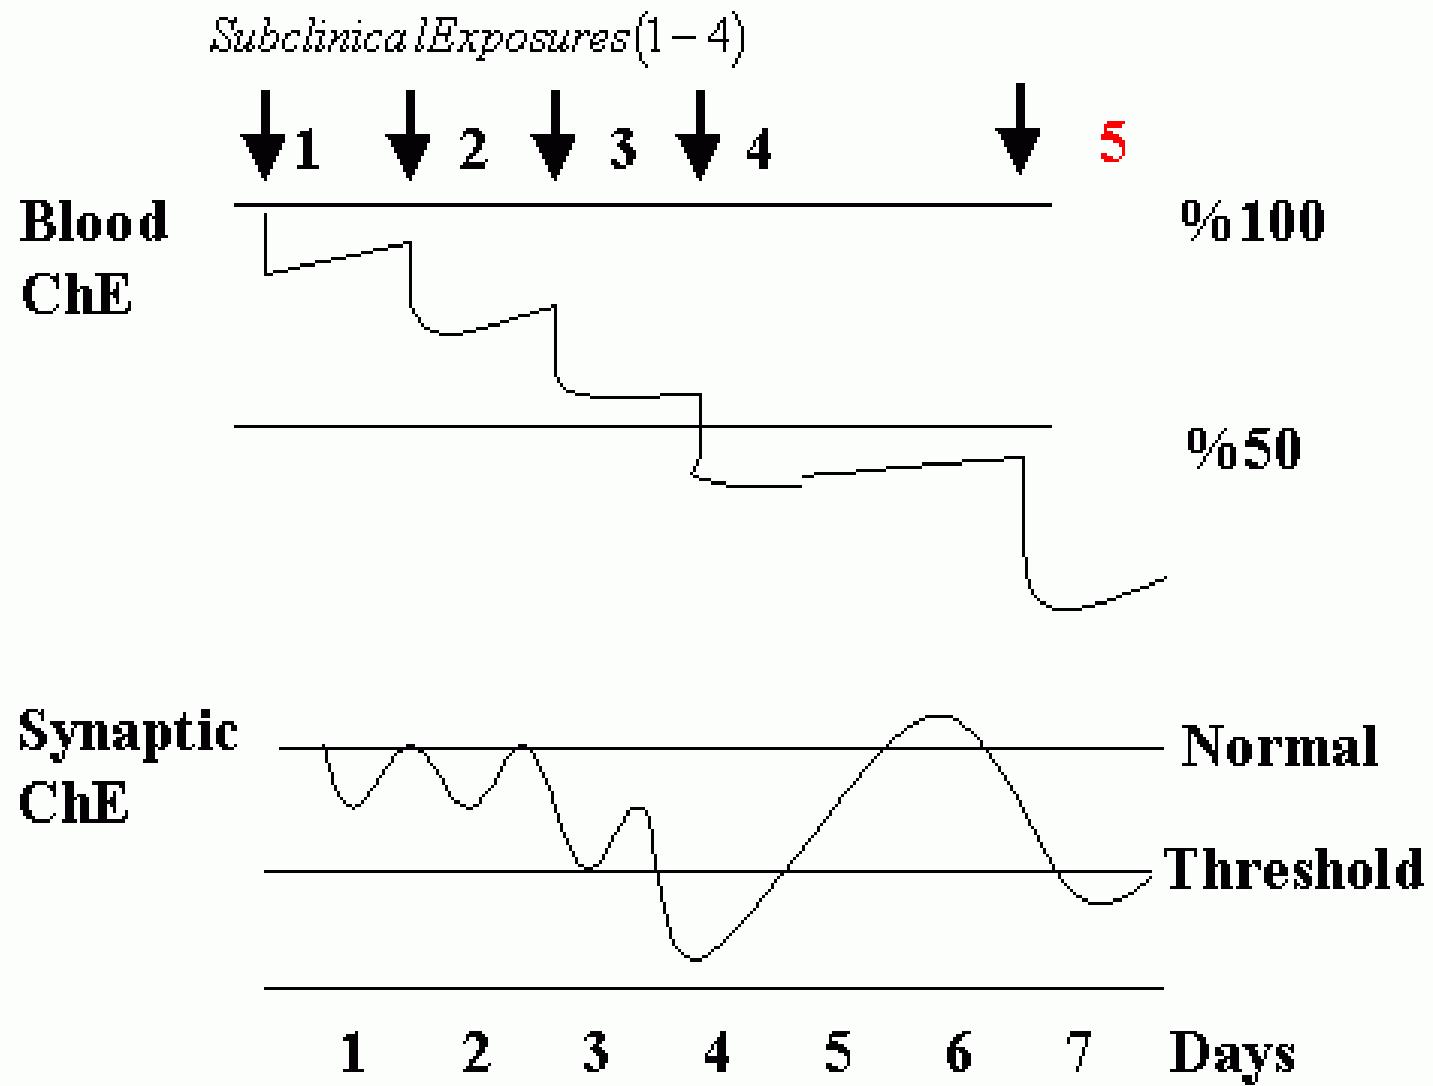

Phosphoryl enzyme

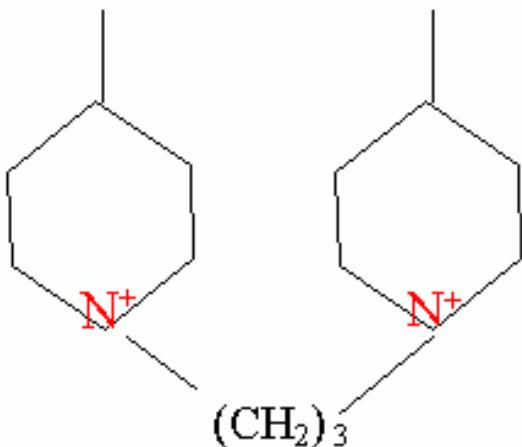

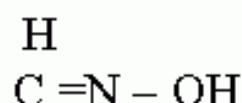

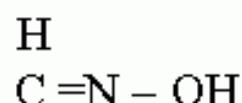

Active enzyme

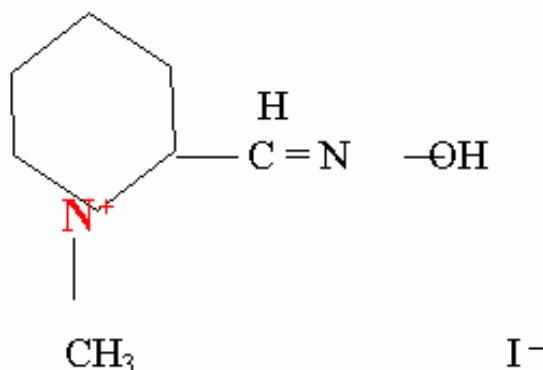

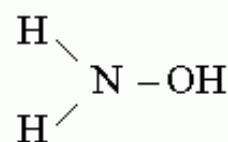

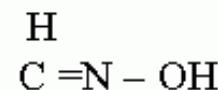

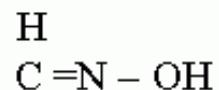

Hydroxylamine

Pralidoxime

# Cyanide Poisoning

Br / Cl / H-C#N - اسید سیاندریدیک

K / Na - سیانورژن کلراید - سیانورژن بروماید

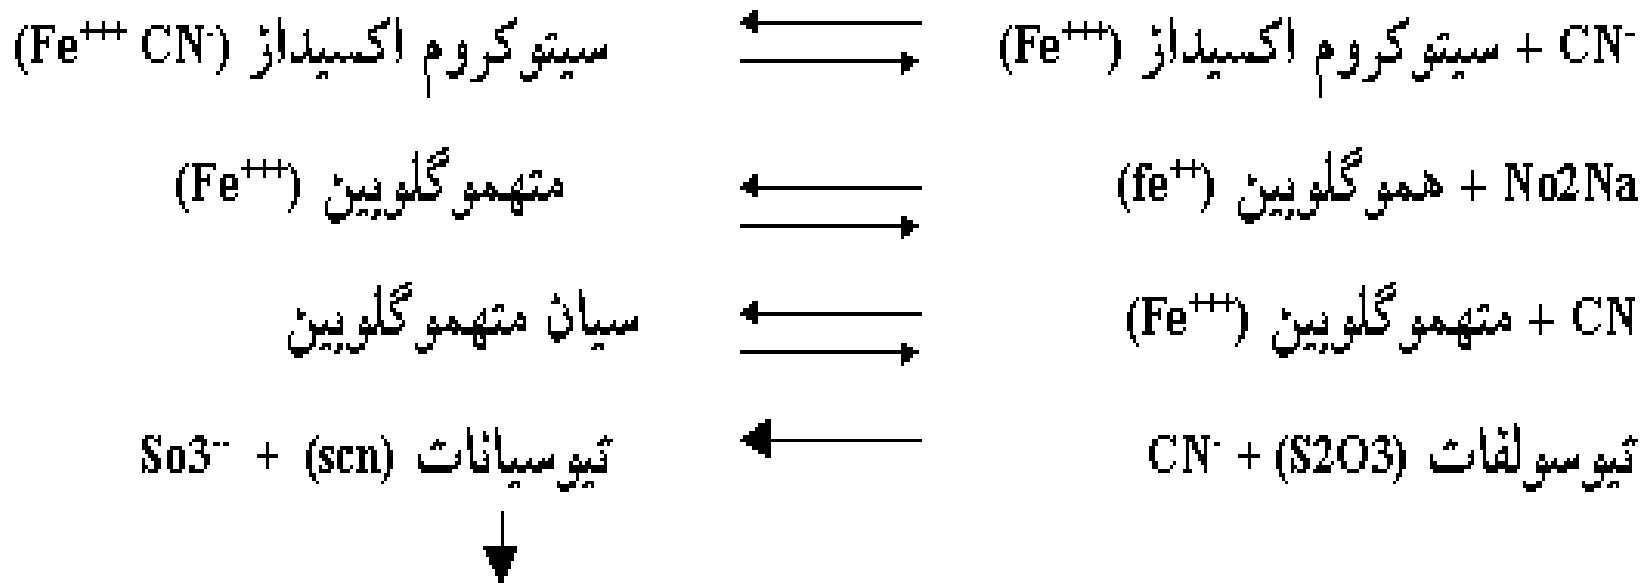

- سیاناید سدیم، پتاسیم

Amigdaline -

Sodium Nitroprusside -

- ماده اولیه صنایع شیمیایی، سوختن برخی ترکیبات شیمیایی

MIC (CH3-NCO) -

دفع اداری

علائم بالینی	مرحله ۱ تحریک	مرحله ۲ دپرسیون
CNS	-تعریق سردرد - سرگیجه - اضطراب	کاهش هوشیاری - اغماء - تشنج
دستگاه تنفس	-تنفسی نفس - تاکی پنه - گلگون شدن پوست و مخاط	ضعف و کاهش تنفس - سیانوز - وقفه تنفس
دستگاه گردش خون	افزایش فشار خون - برادی کاردی رفلکسی	سقوط فشار خون - تاکیکاردي -کلاریس قلبی و عروقی

١ - اکسیژن (+ نیتریت استشائافی)

٢ - \* نیتریت / تیوسولفات + ۳ میلیگرم نیتریت

تیوسولفات / DMAP \*

DICOBALT-EDTA

٣ - مصرف مایعات فراوان
